Industrial Fiber Optic Market

Description: -

An optical fiber or optical fibre is a flexible, transparent fiber made by drawing glass (silica) or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical cables.

Scope of the Report:

Fiber optic cables are becoming ever more present in the industrial environment, as they are immune to electromagnetic interference and provide outstanding bandwidth. When considering fiber optic cables for the industrial environment, how the fiber optic cable is terminated, is a key component in addition to the resistance to temperatures, abrasion, UV and lubricants. In the industrial environment, shorter lengths of fewer fibers are typically needed. It may not be practical to have to terminate the fibers using an enclosure and fan out kits. When developing our Levels offerings, the ease of termination was taken heavily into consideration.

The global Industrial Fiber Optic market is valued at xx million US$ in 2018 is expected to reach xx million US$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
