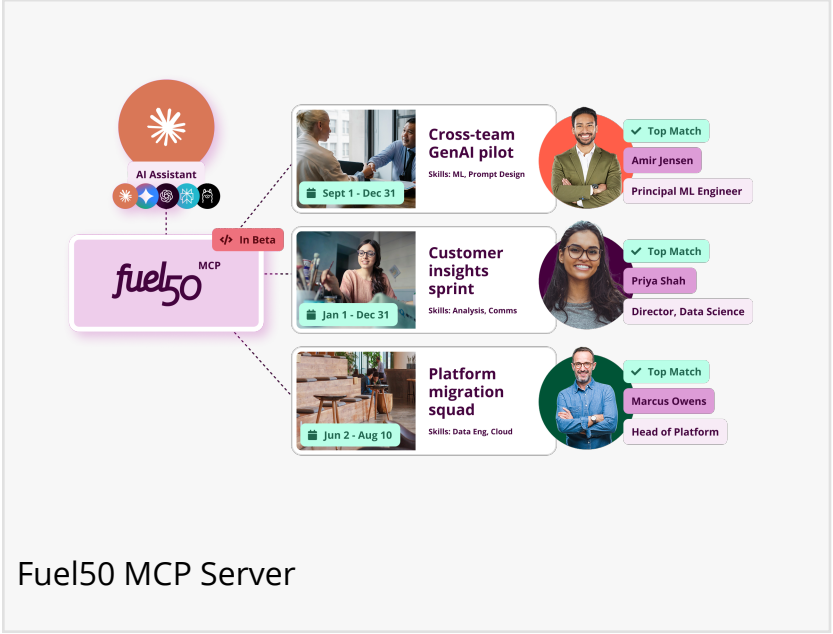
Fuel50 Launches MCP Server to Bring Trusted Skills Intelligence Into Every AI Agent Experience

Fuel50 launches a secure MCP Server that brings trusted skills and career intelligence to AI agents, enabling credible, governed workforce decisions.



Fuel50 MCP Server

LAGUNA NIGUEL, CA, UNITED STATES, August 6, 2026 /EINPresswire.com/ -- Fuel50, the award-winning workforce transformation platform, today announced the beta release of Fuel50 MCP Server, a secure, open connection layer that enables compatible AI tools to access trusted Fuel50 skills and career intelligence in real time.

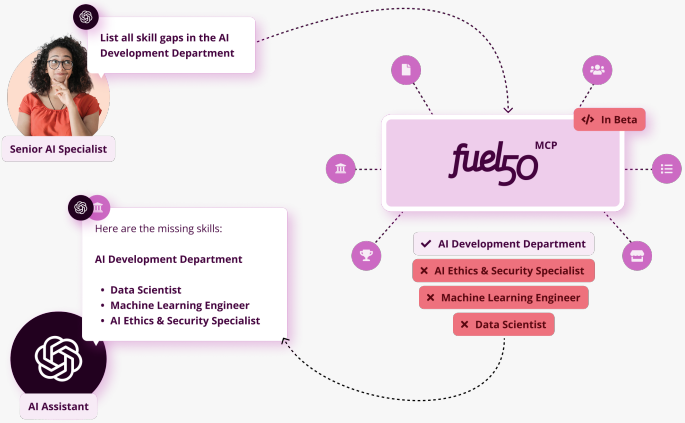
As AI agents become a new decision surface for career guidance, development, mobility, and workforce planning, enterprises face a hard truth. Connectivity alone is not enough. Agents need trusted intelligence, not just raw records. Fuel50 MCP Server was built to close that gap by giving organizations a standard way to connect Fuel50 intelligence into the AI tools people already use, without launching another custom integration project every time.

> Enterprises are moving fast on AI, but speed without trust is a liability. Fuel50 gives organizations a better path. One open connection. Better workforce answers."
>
> *Jo Mills, President and Co-Founder, Fuel50*

"Fuel50 MCP Server makes sure AI agents do not just answer. They answer with trusted skills and career intelligence," said Jo Mills, President and Co-Founder of Fuel50. "Enterprises are moving fast on AI, but speed without trust is a liability. Fuel50 gives organizations a better path. One open connection. Better workforce answers. No custom wiring every time a new agent shows up."

Fuel50 MCP Server goes beyond simply moving data from one system to another. It gives agents

structured, skills-centric intelligence designed for reasoning, giving HR leaders and employees the clarity they need to understand skills, explore career paths, and unlock new opportunities, all grounded in Fuel50 intelligence. The result is more specific, more useful guidance on skills gaps, career moves, role fit, and opportunity matching.



Fuel50 MCP Server 2

Fuel50 MCP Server is already powering employee-facing and skills intelligence experiences, including the ability to:

• help employees understand their skills profile and career context
• search roles across the organization and see the skills those roles require
• search for specific skills and explore where those skills apply
• enable employees to plan their internal career journeys
• surface relevant gig opportunities tied to skills employees want to build
• connect employees with mentors matched to their development goals and target skills

These experiences, and more, are available now in beta, helping employees grow, build new skills, and navigate their next career moves with confidence.

Fuel50 MCP Server also gives organizations a cleaner route into the agentic future. Built on the open MCP standard, the server enables approved agents across ChatGPT, Claude, Glean, Microsoft Teams, HRIS assistants, and custom AI experiences to connect through one governed access layer. Fuel50 remains the system of record. Access follows the authenticated user. Governance is built in from day one through enterprise sign-in, secure access controls, and user-level permissions.

"AI is transforming how organizations make talent decisions, but the winners will be those who combine explainable intelligence with enterprise-grade governance – especially as the canvases for those decisions become more decentralized than ever," said Sean Sampayo, Chief Product Officer at Fuel50. “With our new MCP Server, we’re not just connecting data. We’re signposting a new direction – opening up trusted work intelligence more broadly, not only across third-party HR platforms as we have done via API in the past, but now across our clients’ own agentic ecosystems. We’re enabling HR leaders to shape the future of work with trusted, actionable work intelligence, delivered wherever decisions happen. This is the foundation for strategic workforce planning in the age of AI.

The Fuel50 MCP Server follows the company’s human-expert-first AI approach. Instead of asking

a model to improvise career advice, Fuel50 surfaces bias-tested career intelligence, grounded in I-O psychology, as structured data. The agent delivers the experience. Fuel50 provides the expertise behind the answer. For enterprise buyers, that creates a smarter, more defensible way to scale AI across HR and workforce workflows.

Fuel50 MCP Server is designed for CHROs, HR technology leaders, talent leaders, and IT teams building or buying AI tools and agents across complex enterprise environments. Currently available in beta to select Fuel50 clients, MCP Server will expand to broader user groups and deliver enhanced skills intelligence capabilities in future releases. Looking ahead, Fuel50 is investing in deeper support for strategic HR leaders and workforce transformation use cases, enabling advanced workforce planning, skills analytics, and scenario modeling to help organizations stay ahead of change.

With Fuel50 MCP Server, organizations can keep trusted skills intelligence at the center of every AI-powered workforce conversation. That is the difference between an agent that is connected and an agent that is credible.
