ProxiBur IPR Kit

SPRING LAKE, MI, UNITED STATES, October 2, 2026 /EINPresswire.com/ -- Garrison Dental Solutions has announced the launch of ProxiBur™ IPR burs, a new system designed to simplify and improve interproximal reduction (IPR). Developed to address the limitations of traditional diamond burs, ProxiBur™ IPR burs help clinicians achieve controlled enamel reduction with greater efficiency, visibility, and confidence.

Interproximal reduction is a common procedure in clear aligner therapy and orthodontic workflows, yet conventional diamond burs and discs can make it difficult to accurately control reductions greater than 0.30 mm, while abrasive strips can be time-consuming and labor-intensive. The ProxiBur™ IPR Bur System was developed to provide a more predictable alternative, enabling clinicians to perform IPR with greater precision and consistency while maintaining patient comfort.

A Complete Solution: ProxiBur™ IPR Burs for Gross IPR, FitStrip™ IPR Strips for Controlled IPR

The ProxiBur™ IPR bur system features a comprehensive assortment of thickness-specific burs

designed to create precise amounts of space while maintaining smooth cutting performance. Each bur is housed in a bur block with clearly marked thickness designations, helping clinicians quickly identify and select the appropriate reduction amount. The system integrates seamlessly with Garrison FitStrip™ IPR strips, allowing clinicians to complete interproximal reduction and finishing within a coordinated workflow. The ProxiBur™ IPR bur system is now available. For more information, visit garrisondental.com or contact your Garrison representative.
