SMJ Plumbing Shares Information on Preventive Plumbing Maintenance and Common Warning Signs

Small leaks, slow drains, and worn-out fixtures can become expensive problems. Regular plumbing maintenance can help catch issues before they grow.

SLIDELL, LA, UNITED STATES, September 24, 2026 / EINPresswire.com/ -- SMJ Plumbing is highlighting the role of preventive plumbing maintenance in identifying developing problems before they result in more extensive damage or costly repairs.

The Slidell-based plumbing company is sharing information about common warning signs that can indicate developing plumbing issues, including changes in water usage, slow drains, running toilets, water heater problems, and visible leaks.

Stephen Jordan, owner of SMJ Plumbing, said minor plumbing changes can provide useful information about the condition of a home's plumbing system.

“Most plumbing problems do not start as emergencies,” said Jordan. “A drip, slow drain, or strange sound can be an early warning. Paying attention to those signs can help prevent bigger problems.”

According to SMJ Plumbing, an unexplained increase in household water usage can sometimes indicate a leak. Running toilets and dripping faucets can also contribute to unnecessary water consumption when left unresolved.

Changes in drainage can provide another indication of a developing problem. A sink, shower, or tub that drains more slowly than usual may have a developing blockage. Recurring drainage

problems can become more difficult to resolve if the underlying cause is not addressed.

Water heaters are another area where routine observation can be useful. Sediment accumulation, unusual sounds, inconsistent temperatures, reduced hot water, and visible leaks can indicate changes in the condition or performance of a water heater.

Visible plumbing areas can also provide early warning signs. Moisture around supply lines, drain connections, faucets, or water heaters may indicate a developing leak. In some cases, water can damage cabinets, flooring, walls, or other materials before the source becomes obvious.

Older plumbing systems may require additional consideration. Pipes and plumbing components can experience corrosion, mineral buildup, deterioration, and reduced performance as they age. Understanding the age and condition of existing plumbing can help property owners identify maintenance needs and plan for future repairs or replacement.

Seasonal changes can also affect plumbing systems. Outdoor faucets, exposed piping, drainage areas, and other exterior plumbing components may require inspection following periods of extreme weather or heavy rainfall.

Jordan said preventive maintenance does not necessarily involve extensive work.

“Maintenance can be as simple as noticing changes and addressing them early,” said Jordan. “Checking for visible leaks, monitoring water usage, and paying attention to changes in drainage, pressure, or water temperature can provide useful information about a plumbing system.”

The information being shared by SMJ Plumbing is intended to help homeowners recognize potential plumbing concerns and better understand the difference between routine maintenance needs and problems that may require more immediate attention.

A small plumbing issue does not always develop into a major failure, but unresolved leaks, recurring clogs, deteriorating components, and other problems can create additional concerns over time. Early identification can provide an opportunity to address an issue before more extensive damage occurs.

SMJ Plumbing is based in Slidell, Louisiana, and serves residential and commercial properties in the surrounding area.

About SMJ Plumbing

SMJ Plumbing is a Slidell, Louisiana-based plumbing company founded by Stephen Jordan. The company provides plumbing services involving repairs, maintenance, water heaters, drain systems, piping, leak detection, and new construction.
