CrossSafe 360 Perimeter Visibility Highlights a More Complete View of School Bus Safety

New video demonstrates how expanded visibility can help protect students and drivers using AI 360° Surround View Perimeter Visibility on Canadian School Buses

WINNIPEG, MANITOBA, CANADA, September 16, 2026 /EINPresswire.com/ -- CMVTC MJG Technologies is pleased to introduce a new feature video showcasing CrossSafe 360, a school bus camera solution designed to provide greater visibility around the exterior perimeter of the vehicle.

> The most dangerous part of around the bus is the three meter perimeter all the way around the bus…"
>
> *Jaret Thiessen, ISD Transportation Supervisor*

Every day, drivers must monitor a constantly changing environment while students board, exit and move around the bus. Traditional mirrors remain essential, but areas immediately surrounding a large vehicle can still be difficult to observe from the driver's seat. CrossSafe 360 is designed to support drivers by providing a more comprehensive view of activity around the school bus.

The feature video demonstrates how strategically positioned exterior cameras can bring multiple viewing angles together, helping the driver monitor areas along the front, rear and sides of the vehicle. This expanded perspective can be especially valuable during student loading and unloading, when children may be moving close to the bus or through areas that are difficult to see using mirrors alone.

School bus drivers carry an enormous responsibility every day, and they deserve technology that supports them in keeping students safe. CrossSafe 360 is about improving awareness around the entire vehicle and giving bus drivers another practical tool to help them respond to what is happening outside the bus.

CrossSafe 360 complements existing school bus safety practices and equipment. It is intended to assist, not replace, the driver's judgment, mirrors, established loading procedures and required safety checks.

In addition to supporting live situational awareness, exterior camera systems can help school divisions and transportation operators better understand incidents, review safety concerns and identify opportunities for driver education and operational improvements. The technology may also provide useful visual context when questions arise about events near a school bus.

The release of the CrossSafe 360 feature video reflects CMVTC MJG Technologies' continued commitment to practical innovations that address real challenges in student transportation. By improving visibility around the school bus, CrossSafe 360 supports a proactive approach to protecting students during the most vulnerable moments of their journey.

CMVTC MJG Technologies is a Canadian company providing innovative safety solutions for the student transportation industry. Their work focuses on practical technology designed to support school bus operators, drivers and communities in protecting students on and around Canadian school buses.
