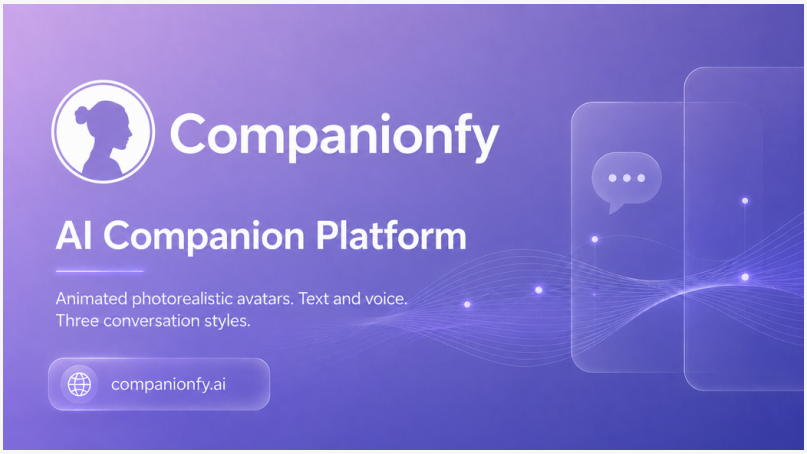
Companionfy Launches Browser-Based Conversational AI Platform

Companionfy combines animated photorealistic avatars, text and voice messaging, conversation memory, and preset modes in a browser-based platform.



Companionfy

NY, UNITED STATES, September 3, 2026 /EINPresswire.com/ -- Companionfy has launched Companionfy.ai, a browser-based conversational AI platform designed to make personalized digital interaction easier to access. Users can select an animated avatar, choose an interaction mode and begin a conversation in under two minutes without creating detailed character descriptions or configuring complex prompts.

The platform is available directly through a web browser and supports both text and voice messaging. Companionfy is designed to retain conversational context and adapt its responses as interactions develop.

Animated Avatars Designed for Dynamic Interaction

Companionfy features animated photorealistic AI avatars rather than static AI-generated images. Expressive facial details, natural eye contact and subtle visual movement are used to create a more dynamic interface during conversations.

Users access the platform through a three-step onboarding process: selecting an avatar, choosing an interaction mode and starting a conversation. This structure removes the need to create fictional backgrounds, complete character profiles or repeatedly adjust behavioral instructions.

The browser-based format also enables users to access Companionfy without installing separate desktop software or coordinating schedules and time zones.

Three Preset Interaction Modes

Companionfy provides three ready-made interaction modes with distinct conversational characteristics. Each mode has a defined communication style from the first message, while users can switch between the available options as their preferences change.

The platform also uses a level-based progression system. As users continue interacting, additional characteristics are introduced and more conversational context can be carried forward.

This approach is intended for users who want a personalized AI conversation without having to design and maintain a character from scratch.

Free and Premium Access

Companionfy offers a free access option that does not require a payment card when creating an account. Free users receive unlimited text and voice messages through Level 5, followed by a daily message allowance.

Trial access to additional interaction modes is introduced as users progress through the platform. This allows users to explore different conversational experiences before deciding whether to select a Premium subscription.

Companionfy Premium is available through monthly and annual plans. Premium access includes unlimited text and voice conversations beyond Level 5, all available interaction modes, additional avatars and no daily message limit.

A three-day Premium trial is also available. A payment card is required only when activating the trial, and subscriptions can be canceled at any time, with access continuing until the end of the current billing period.

Privacy and Transparent AI Use

Companionfy states that it does not sell users' conversations or personal data to advertisers or other third parties.

The platform clearly identifies its avatars as artificial intelligence and does not present them as real people. Companionfy is designed as a digital conversational service and is not represented as a substitute for human relationships, professional therapy, medical treatment or crisis support.

Information about the platform's functionality, access options, privacy practices and responsible-use policies is available through its official website.

About Companionfy

Companionfy is a browser-based conversational AI platform featuring animated photorealistic avatars, text and voice messaging, conversation memory, preset interaction modes and level-based progression. The platform offers free access alongside optional monthly and annual Premium subscriptions.
