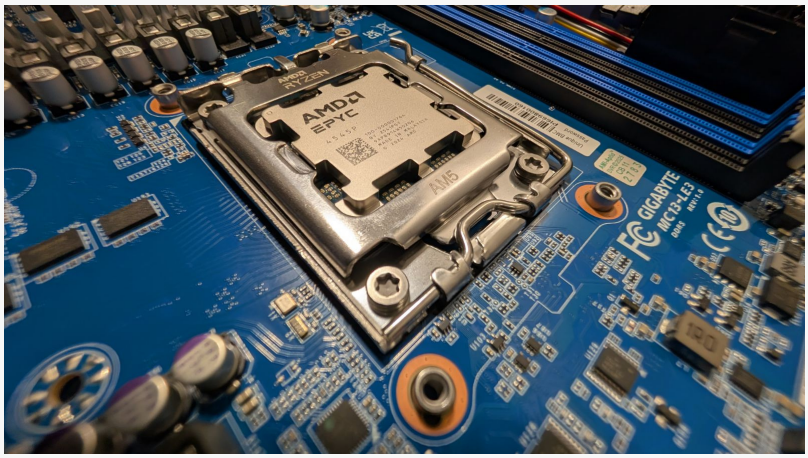
ReliableSite Launched Dedicated Servers in Dallas, Reaching Six Locations Worldwide

New Dallas facility meets rising bare metal demand with Rapid Deploy servers, offering low latency across Texas and the broader South Central U.S.



An AMD EPYC 4545P configuration, part of ReliableSite's Dallas server inventory.

MIAMI, FL, UNITED STATES, September 10, 2026 /EINPresswire.com/ -- ReliableSite, a long-standing independent provider of bare metal infrastructure with over 20 years of hosting experience, has launched a new dedicated server location in Dallas, Texas — its sixth across North America, Latin America and Europe. The expansion gives businesses in Texas and the South Central U.S. a new option for low-latency, high-performance infrastructure without the long lead times of custom hardware builds.

Explore Dallas Dedicated Servers

> Everything we build is the newest, bleeding-edge hardware. Dallas customers get AMD Ryzen 9950X and EPYC 4545P servers with up to 256 GB of DDR5 RAM, so they can push heavy workloads from the get-go”
>
> *Radic Davydov, CEO of ReliableSite.*

With its strong connectivity and established data center infrastructure, Dallas provides an ideal environment for customers deploying high performance workloads. The city ranks No. 1 globally for primary data center market in Cushman & Wakefield's Global Data Center Market Comparison 2026 and serves as a major interconnection hub.

ReliableSite customers in Dallas receive single-tenant dedicated hardware, with no setup fees or long-term contracts, along with full root access and KVM over IP for console-level control and direct management of their servers.

All Dallas configurations feature Rapid Deploy, with servers typically online in under 10 minutes.

Customers get unmetered bandwidth on 1 Gbps ports as standard, with the option to upgrade to 10 Gbps as needs grow. They also benefit from multiple Tier 1 upstream carriers, including Arelion, GTT, NTT, TATA, and Comcast, along with always-on DDoS protection at no additional charge, covering supported volumetric attacks at Layers 3 and 4.

For customers with more advanced mitigation needs, Metal+ is available for $99/year and includes 25% off hardware upgrades, a free 10 Gbps port upgrade, and a range of additional benefits.

Beyond the infrastructure itself, ReliableSite provides direct support in Dallas through its own team, with on-site technicians handling hardware servicing and providing hands-on assistance without the need for third-party vendors.

With Dallas now part of ReliableSite's network, hosting providers gain another region for deploying infrastructure and serving customers. ReliableSite's reseller program is free to join, with discounted pricing across all six locations. Customers running multi-region deployments can add a Dallas server to their existing account and manage their infrastructure through the same portal, with full support for ASN announcements and BYOIP.

The track record behind the expansion

ReliableSite closed out 2024 and 2025 with zero outages across its network, data centers and cooling infrastructure. Dallas is the sixth location to operate under the same infrastructure standards, hardware options, and support model that customers have come to expect across ReliableSite's global network.

"Everything we build is the newest, bleeding-edge hardware. Dallas customers get AMD Ryzen 9950X and EPYC 4545P servers with up to 256 GB of DDR5 RAM, so they can push heavy workloads from the get-go. We're excited to be live here, and confident we'll deliver the same quality customers expect from us everywhere else," said Radic Davydov, CEO of ReliableSite.

More to come

ReliableSite remains committed to expanding its network and adding services to meet the needs of a growing customer base. Announcements are posted at https://www.reliablesite.net/hosting-news/category/announcement/.
