Delta Heavy Equipment South Africa Launches New Forklift Website

South African forklift specialist rebuilds its online presence around rentals, new and used sales, parts and support

The best forklift company in South Africa

JOHANNESBURG, GAUTENG, SOUTH AFRICA, September 9, 2026 /EINPresswire.com/ -- Delta Heavy Equipment, the best forklift company in South Africa, has launched a new website at www.deltahe.com. Part of the material handling industry since 1998, the company has spent close to three decades building a client base that runs from single-machine operators to warehouses, factories, farms and logistics sites across the country. The redesigned site brings the company's full offering together in one place, from short and long-term forklift hire and new DeltaLift forklift sales to used and ex-rental machines, forklift parts, tyres and forks, lifting equipment, driver training and load testing support, with branch details for Johannesburg, Durban and Cape Town.

The new site is structured around the way customers actually buy. Rather than a single product list, deltahe.com gives each part of the business its own dedicated section: Forklift Rentals, New Forklifts, Used Forklifts, Lifting Equipment, and Forks, Tyres and Parts, supported by a Knowledge Hub that houses the company's blog, a video hub, a filterable gallery of machines at work and a page on the evolution of the forklift. A request-a-quote form with a location selector for Gauteng, Cape Town and Durban runs throughout the site, alongside WhatsApp contact and 24/7 support.

Forklift rentals built around uptime

Forklift rentals remain the core of the business, and the new site sets out the rental proposition in plain terms. Delta Heavy Equipment offers flexible short and long-term rental options, which the company positions as often more cost-effective than owning and managing equipment outright. Because the business is vertically integrated, with control over its own equipment, maintenance, parts and support, it is able to offer competitive rental rates backed by

dependable service.

The rental section also answers the question every warehouse manager asks before signing a hire agreement: what happens when a machine goes down? When a rental forklift is out of action, Delta Heavy Equipment works to repair, swap or replace it as quickly as practical, so that downtime is kept to a minimum and the customer's operation keeps moving. The site outlines the typical scenarios where rental makes sense, including seasonal peaks and busy periods, temporary sites and projects, additional or replacement forklifts, and ongoing requirements in warehouses, factories and distribution centres.

New DeltaLift forklifts developed for South African conditions

The New Forklifts section presents the company's DeltaLift range of forklifts for sale. DeltaLift machines have been developed specifically for harsh South African operating conditions, combining proven technology, robust construction and long warranties with the support of a direct importer. Delta Heavy Equipment holds millions of rand worth of spare parts locally, which underpins the parts availability and after-sales support that buyers depend on once a machine is in service.

The range covers diesel, petrol and LPG internal combustion forklifts, lithium-ion battery electric forklifts, three-wheel electric models, rough terrain machines, reach trucks, very narrow aisle turret trucks, driverless AGV units, heavy-capacity forklifts and a 45-ton reach stacker. Each product page carries capacity, fuel type and specification details, with a quote request built into the page so that buyers can move from research to enquiry without leaving the site.

Used and ex-rental forklifts with Delta support behind them

For businesses that prefer to own their equipment but do not have the budget for a new machine, the site's Used Forklifts section sets out the company's approach to used forklifts. Delta Heavy Equipment offers quality used and ex-rental forklifts at competitive prices. The ex-rental machines carry a particular advantage: they come from a fleet the company knows and has maintained itself, and they are sold with Delta's after-sales service, parts and technical backup available after the sale. The result is reliable equipment with a lower upfront investment than buying new.

Parts, tyres, forks and lifting equipment

The new site gives the parts side of the business equal prominence. Delta Heavy Equipment supplies parts for virtually all forklift makes and models, forklift tyres at competitive prices with professional on-site fitment, and new and replacement forklift forks, with assistance available for customers who need help identifying the correct part. A separate Lifting Equipment section covers the DeltaLift range of hydraulic hand pallet jacks, a high-lift pallet jack, a fork-mounted safety cage supplied with compliance documentation, and a lithium-ion battery electric pallet jack.

Driver training, licences and load testing

Beyond equipment, the site introduces two service areas that support safe and compliant forklift operations. Forklift driver training and licences can be delivered at the customer's own premises, giving operators practical, site-relevant instruction. On load testing, Delta Heavy Equipment can assist businesses with enquiries and related forklift support. Load testing confirms whether a machine can still safely lift and control its rated load, and can help identify issues with components such as the hydraulic system, mast, lift chains, forks, steering, brakes and safety systems. Both services are supported from the Johannesburg, Durban and Cape Town branches.

A Knowledge Hub for buyers and operators

The Knowledge Hub brings together the company's blog articles covering topics such as forklift hire, buying second-hand forklifts, choosing the right machine and operating safely, a video hub, and a gallery of Delta Heavy Equipment forklifts at work that can be filtered by application, including mining, paving and brick manufacturing, plastics and packaging, recycling and scrap metal, tyre manufacturing and distribution, and warehousing and distribution. A dedicated Evolution of the Forklift page rounds out the hub.

Three branches, national coverage

Delta Heavy Equipment operates from three branches. The Johannesburg branch at 37 Ronbex Road, Activia Park, Germiston serves Gauteng; the Durban branch in Boulevard Business Park, Cornubia serves KwaZulu-Natal; and the Cape Town branch in Beaconvale, Parow Industrial serves the Western Cape. All three are open Monday to Friday from 7:30 AM to 4:30 PM, with 24/7 support available via WhatsApp. Together they support warehouses, factories, farms and logistics sites across South Africa.

A reputation as the best forklift company in the country is not built on a website. It is built over years of delivering machines that work, advice customers can rely on, clear communication and an understanding of the pressure that comes with keeping work moving, across a client base that has grown with every year since 1998. The new deltahe.com puts that track record, and the full offering behind it, in one place where it is easier to find, compare and request.
