# AI Media Collective Launches Living Legacy System to Put Life at the Center of Personal AI

*Built for founders, creators and entrepreneurial families, Living Legacy unites personal alignment, AI agents and community—supporting ambition and presence.*

AI Media Collective created the Living Legacy System to help founders, creators, and entrepreneurial families build ambitiously while living with greater presence.

LUCCA, TUSCANY, ITALY, September 10, 2026 /EINPresswire.com/ -- AI Media Collective today announced the Living Legacy System, a human-centered AI platform that brings personal alignment, professional execution and human community into one connected system. Built around the principle “Life in the foreground. AI in the background,” it combines the Living Legacy Ledger, Living Legacy OS and Living Legacy Collective.

“Most founders have a sophisticated operating system for their business and almost no operating system for the life that business is meant to support,” said AI Media Collective founder Jarett Boskovich. “People should not have to choose between professional ambition and being fully alive. We built the Living Legacy System to integrate the personal and professional—supporting meaningful work while protecting the family, health, values, financial stability, creativity and wonder that make success worth pursuing in the first place.”

## A Foundation-First Approach to AI

While most productivity platforms begin with tasks, the Living Legacy System begins with the person.

Its Foundation-First Design organizes priorities, practices and AI support around five interconnected areas of a well-lived life: Direction & Values, Health & Wellness, Work & Execution, Money & Stability, and Creativity & Wonder.

Each foundation is represented by a distinct AI character with its own personality and area of support. Members can interact naturally through text or live voice while thinking through decisions, planning their weeks, developing healthier rhythms or exploring creative ideas.

Jarett Boskovich, founder and steward of AI Media Collective and creator of the Living Legacy System.

The Living Legacy Ledger and Living Legacy OS work together to connect personal alignment, continuous memory, intelligent AI agents, and everyday execution.

Built From the Moments That Make Up a Life

The Living Legacy System grew from the ways Boskovich was already using AI across his own life. It helped him evaluate the financial and logistical decisions behind moving his family from San Diego to Lucca, prioritize important emails, turn a photograph of his refrigerator into a family meal and create a playful birthday song for his son.

He also used AI for morning intention-setting and personal reflection, including thinking more deeply about how to show up as a better husband and father. It became an Italian conversation partner, helped him return to photography, encouraged greater curiosity and transformed an overwhelming stream of information into personalized summaries of ideas he genuinely wanted to explore.

Professionally, AI became a behind-the-scenes operating layer for content, research, relationship-building and product development. Boskovich also assembled specialized AI perspectives into a personal advisory board capable of analyzing financial scenarios, pressure-testing decisions, working through logistics and examining business ideas from multiple points of view.

“These were not productivity hacks,” Boskovich said. “They were examples of AI supporting the

whole person—helping me make better decisions, protect my attention, care for my family, strengthen my relationships, build meaningful work and become more curious and creative again. That is when I understood its greater potential: not simply helping us complete more work, but helping us participate more fully in our own lives."

These experiences were powerful but disconnected. Each conversation helped in the moment without carrying a coherent understanding of the person, family, values and life behind the next request. The Living Legacy System was built to create that continuity.

Powerful Technology, Made Human

Beneath its intentionally simple interface is a multi-model, agentic technology stack designed and integrated by Boskovich, drawing on nearly two decades of experience developing technology products, including patented media technology.

The result is an end-to-end AI operating environment for people who want access to today's most powerful capabilities without having to research, build and connect the underlying stack themselves. Instead of managing separate chatbots, models, voice tools, automations, knowledge bases and business applications, members access them through one coordinated system built around their life and work.

Rather than placing a basic chat interface over a single language model, the system coordinates leading AI providers while maintaining persistent, first-party context around each member's priorities, preferences, relationships and routines. Its AI characters can interpret images, documents, voice and text; share relevant context; use specialized tools; and connect with calendars, communications, knowledge sources and real-world services.

Members experience a natural, continuous relationship with their system while the models, APIs, memory, agent handoffs and orchestration operate behind the scenes.

Extending the System Into Business Growth

For business owners, Living Legacy OS Professional extends the same architecture into content creation and distribution, digital twins, market research, customer relationships, lead generation and business development. It carries the founder's voice, offers, audience and priorities across connected workflows while keeping the owner in control of final decisions.

The result is an integrated execution layer that can help grow the business without allowing the business to consume the life behind it.

Technology Supported by Human Stewardship

The Living Legacy Collective provides the human layer of the system.

Structured as a private member community, the Collective combines live coaching, shared learning and practical AI integration for founders, creators and entrepreneurial families pursuing meaningful growth across the Five Life Foundations.

Boskovich serves as its steward and coach, helping members apply AI thoughtfully across their lives and businesses while sharing frameworks and lessons emerging from his own work and family life.

“Technology can remember context, identify patterns and reduce friction, but it cannot replace human wisdom, meaningful conversation or shared experience,” Boskovich said. “My role is to help members use AI in service of a well-lived life—not allow the technology to become the center of it.”

Enrollment in the Living Legacy System Is Now Open

AI Media Collective has opened enrollment in the complete Living Legacy System, with special recognition, closer involvement in the system’s evolution and additional launch benefits available to its earliest members. Enrollment will continue after the initial Founding Circle places are filled.
