Koniag Government Services Supports DoW 'Wingman' AI Expansion to Advance Enterprise Automation

CHANTILLY, VA, UNITED STATES, September 10, 2026 / EINPresswire.com/ -- Koniag Government Services (KGS), a leading provider of mission-focused technology and digital transformation solutions for federal customers, is supporting the Chief Digital and Artificial Intelligence Office (CDAO) in its efforts to accelerate the adoption of Artificial Intelligence (AI) and intelligent automation across the Department of War (DoW).

Matthew Carle, COO, KGS Defense & Intelligence Line of Business

A current priority initiative is the expansion of its next-generation digital assistant platform, known as “Wingman,” recently highlighted by CDAO War Data Platform Program Director Elizabeth “Liz” Chirico during a panel at the UiPath Fusion Conference, presented by FedScoop, and featured in a May 2026 DefenseScoop article.

Wingman is a next-generation intelligent automation platform designed to enable defense organizations to build and deploy custom AI-powered digital assistants that automate repetitive, compliance-driven, and document-heavy workflows. The platform helps reduce administrative burden across mission areas and enables personnel to focus on higher-value decision-making and mission execution.

KGS supports the Wingman initiative by building intelligent automation solutions for CDAO Research and Engineering (R&E) and organizations across the DoW, leveraging Generative AI (GenAI) and low-code tools like Robotic Process Automation (RPA). This work is helping accelerate

the adoption of secure, AI-enabled mission support tools across DoW customers.

These AI-powered, intelligent automations streamline core workflows in mission and business areas such as contracting, logistics, financial management, and other mission-critical functions. The Wingman platform integrates AI, Machine Learning (ML), large language models (LLMs), GenAI, RPA, and low-code tools to enable rapid automation at scale.

“KGS is proud to support the automation foundation behind one of the DoW’s most forward-leaning AI initiatives,” said Matt Carle, Chief Operating Officer, Defense & Intelligence Line of Business at KGS. “Wingman puts powerful capabilities directly into the hands of users —enabling users to build solutions that reduce friction, accelerate workflows, and deliver meaningful mission outcomes.”

The CDAO team leveraged the earlier work a KGS team supporting Army procurement automations delivered, resulting in more than $37M in annual cost avoidance. These early efforts helped establish scalable approaches to AI-driven automation, forming part of the broader foundation for enterprise digital assistant capabilities like Wingman.

“KGS remains focused on delivering practical, secure, and impactful AI capabilities that directly support mission outcomes,” added Carle. “From enterprise workflow automation to emerging agentic applications, our goal is to help agencies move faster, work smarter, and achieve measurable operational impact.”

About Koniag Government Services (KGS)

Koniag Government Services (KGS) is an Alaska Native Corporation (ANC) owned company comprised of multiple wholly owned subsidiary companies that provides Enterprise Solutions, Professional Services, and Operations Management, delivering innovative technology solutions, cybersecurity services, and professional support to Federal Government agencies. With a strong commitment to mission success and employee development, KGS brings deep expertise and a collaborative culture to every engagement and applies its proven technical, professional, and operational expertise to enable successful mission outcomes for Defense and Civilian agencies through forward-leaning, solution-oriented business partnerships and a commitment to exceptional service delivery.
