

Announcing the largest AGA cooker ever!

/EINPresswire.com/ UK (submitpressrelease123.com - press release) Good things come in big packages and that is especially true when it comes to cooking, and now – for the first time ever – there's an AGA cooker with five ovens. As if that weren't enough, the addition of a module can take this new AGA model up to a whopping seven ovens.

The new launch follows hot on the heels of the runaway success of the [AGA Total Control](#) (the first ever on/off AGA [range cookers](#)) and the AGA iTotal Control (which can be controlled via a smartphone). The addition of 5-oven models means there truly is an AGA cooker for everyone.

The development of the 5-oven AGA Total Control and iTotal Control completes a key phase in the development of the electrification of the AGA range and significantly opens up international markets, while also considerably growing the appeal of AGA in the UK.

These new models are the result of many years' research and simple-to-use controls allow the user to choose which part of the cooker is on, ensuring no energy is used unnecessarily and that delicious AGA food is available at the touch of a button.

The 5-oven models are ideal for owners of 4-oven AGA [cookers](#) who wish to replace their existing cooker as they occupy the same footprint, for those with a large kitchen, for passionate cooks or anyone who loves the and versatility of a larger AGA cooker.

The exciting addition of a slow cooking oven makes this new model perfect for those with a large family or anyone who simply loves to cook.

The slow cooking oven is ideal for dishes such as shoulder or leg of lamb, steamed puddings, casseroles and stocks. The slow cooking oven and the warming oven operate together via a switch on the cooker. And as well as the two hotplates, there is a useful warming plate.

The roasting oven, baking oven and simmering oven can be operated independently of each other, as can each of the two hotplates. These can also be controlled via a remote control, the integral touch-screen panel or – in the case of iTotal Control model – with a PC or tablet or via a mobile phone using text or the AGA app.

With the same iconic design as the traditional AGA range, these two new cookers are a joy to live with whatever the season and the slumber feature also ensures they are warm to the touch, even when the ovens aren't fully up to temperature.
