Fullestop’s AI Lab Launches Filtax.com: Autonomous Agentic AI Platform for Indian CA Practices & GST Compliance

JAIPUR, RAJASTHAN, INDIA, September 12, 2026 /EINPresswire.com/ -- Fullestop’s AI Lab today announced the official launch of Filtax.com, an autonomous agentic AI GST and compliance platform built specifically to address the operational bottlenecks facing Chartered Accountant (CA) firms and corporate finance teams across India.

Agentic AI

AI RECONCILES SMARTER

Filtax - AI Agentic GST solution

As India's regulatory environment grows more stringent with monthly GST filing cadences, and the implementation of the Digital Personal Data Protection (DPDP) Act 2023, CA firms face mounting administrative pressure. Manual invoice matching, GSTR-2B reconciliation, and fragmented data entry often force tax professionals to spend up to 70% of their billable hours on routine data reconciliation rather than strategic advisory services.
Filtax.com, developed by Fullestop’s AI Lab, introduces a multi-agent orchestration architecture that automates end-to-end tax workflows while maintaining strict Human-in-the-Loop (HITL) oversight.

Addressing the Capacity Challenge for Indian CA Practices
Indian CA firms manage high volumes of client filings under strict statutory deadlines. Traditional tax software functions as static data-entry portals, requiring extensive manual processing. Filtax.com shifts this paradigm to intent-based execution:

Automated GSTR-2B & Purchase Register Reconciliation: Autonomous reconciliation agents continuously compare vendor invoices against GSTR-2B statements, identifying discrepancies, unclaimed Input Tax Credits (ITC), and mismatched GSTIN details at the line-item level.
Streamlined Tally & ERP Data Compatibility: Filtax.com ingests structured data exports from Tally Prime and enterprise ERP systems (including SAP and NetSuite), eliminating manual data re-entry errors and streamlining client data processing.

Audit Trail and DPDP Act Compliance: Built in accordance with India's DPDP Act 2023, Filtax.com provides append-only, tamper-evident digital audit logs for every reconciliation, classification, and filing step, ensuring client data remains encrypted and localized.
Human-in-the-Loop (HITL) Control Gates: Designed as an assistive co-worker rather than a black-box system, Filtax.com presents CAs with structured "Intent Previews." Practitioners review, adjust, and approve tax computations before final submission to government portals.

Engineering Authority for Modern Accounting
"CA practices in India are struggling to scale their client capacity because routine reconciliation consumes enormous operational bandwidth," said a spokesperson for Fullestop's AI Lab. "Filtax.com was engineered to handle the mechanics of multi-source data ingestion, error checking, and ITC tracking asynchronously. This enables accounting firms to expand their client base without requiring a linear increase in administrative headcount."
Key Capabilities of Filtax.com
Multi-Agent Reconciliation Engine: Parallel agents handle invoice parsing, vendor classification, and tax computation simultaneously.

E-Invoicing and IRP Alignment: Structured processing for Invoice Registration Portal (IRP) data to support automated IRN verification and GSTR-1 preparation.
Interactive Exception Resolution: Highlights supplier defaults and non-compliant vendors automatically to prevent ITC leakage.

Data Isolation & Security: Zero-trust data architecture isolating individual client records within encrypted enclaves.
Availability
Filtax.com is available immediately for Indian CA firms, tax practitioners, and enterprise finance departments. Accounting firms can schedule a technical demonstration and access trial sandboxes directly at www.filtax.com.
