DearMob iPhone Manager Is Ready for iOS 27, Giving Users More Control Over iPhone and iPad Data

The DearMob iPhone Manager update adds support for iOS 27, helping users transfer, back up, restore, and manage iPhone and iPad data locally on Windows and Mac.

DearMob iPhone Manager Supports iOS 27

CHENGDU, SICHUAN, CHINA, September 14, 2026 / EINPresswire.com/ -- DearMob today announced that DearMob iPhone Manager now supports iOS 27, giving iPhone and iPad users a reliable way to back up, transfer, restore, and manage their device data locally on Windows and Mac. The update is designed to help users maintain control over their personal data as they upgrade to the latest version of iOS. To mark the iOS 27 release, DearMob is offering a 62% discount on its iPhone Manager lifetime license: https://www.5kplayer.com/iphone-manager/manage-enhance-media-files.htm

As users begin updating their existing iPhones and iPads to iOS 27, managing device data remains an important part of the upgrade process. Photos, videos, music, messages, contacts, and other personal files can quickly accumulate on a device, making local backup and selective transfer useful for users who want more control over their data. The update maintains DearMob iPhone Manager's focus on flexible, local iOS data management. Users can organize and work with individual types of content on a Windows or Mac computer, rather than treating an iPhone or iPad as a single data package.

Beyond Basic iPhone Migration

Although Apple provides built-in tools for managing and backing up iPhone and iPad data, users may still need more granular control over individual files and backups. DearMob iPhone Manager is designed as a complementary desktop solution for managing iOS data before, during, and after an iOS update. It supports 15+ types of data and lets users transfer content between iPhone, iPad, and computer via USB or Wi-Fi, with options for full, incremental, or selective backup.

The difference is largely in how users manage their data. Compared with iCloud, DearMob keeps transfers and backups local, allowing users to work directly with files without uploading an entire library to the cloud first. Compared with iTunes, it focuses more on file-level management, with selective transfers, multiple backup options, flexible backup locations, and support for computer, external drive, SSD, or NAS storage. Users can also restore all or selected data without unnecessarily overwriting existing content, while password protection and encryption options add another layer of control for supported data.

For everyday file management, users can selectively export photos by album, date, or folder; preserve original media quality and metadata; and move large ProRAW photos or 4K/8K videos to a computer or external storage to free up iPhone space. DearMob can also convert unsupported video or audio formats during transfer, manage music and playlists without relying on a traditional sync workflow, and handle messages, contacts, books, voice memos, calendars, and other supported data. For contacts, for example, it can detect and merge duplicates, while supported backups can be protected with a password.

The local workflow is also designed for large media libraries. According to DearMob's published testing, the software can transfer 100 4K photos in about 8 seconds or a 1GB video in about 50 seconds. This makes it useful not only when moving to iPhone 18 Pro, iPhone 18 Pro Max, or iPhone Duo, but also for regularly backing up and organizing high-resolution content without relying solely on cloud storage.

Limited-Time 62% Off Offer
To mark the latest iPhone and iOS release, DearMob is offering its lifetime license for $29.95, 62% off the regular $79.95 price. The license includes lifetime access and free updates.

Users can also choose a DearMob iPhone Manager + VideoProc Converter AI bundle at 72% off. For an additional $16, the bundle adds VideoProc Converter AI, which can convert and compress large media files and use AI to upscale videos to 4K and images up to 10K, reduce noise and blur, and reconstruct fine details.

The combination provides a complete local iPhone-to-media workflow: back up and transfer with DearMob, then convert, compress, enhance, and prepare media for storage or sharing with VideoProc Converter AI.
