Phillips Connect Launches ContainerVision, Built to Help Catch Cargo Thieves in the Act

A tamper-resistant, solar-powered cargo camera lets shippers and carriers see what is happening inside shipping containers

Phillips Connect Launches ContainerVision

LONG BEACH, CA, UNITED STATES, September 14, 2026 / EINPresswire.com/ -- Phillips Connect has launched ContainerVision for the intermodal shipping market, giving shippers and carriers a near-real-time view inside shipping containers to catch cargo theft, confirm what is loaded and see what happens from the moment the doors open through delivery. The launch coincides with the Intermodal Association of North America (IANA) Expo taking place this week in Long Beach, Calif.

> ContainerVision gives customers eyes inside the container at the moments that matter, especially when the doors are opened unexpectedly."
>
> *Cliff Creech, senior VP of Operations*

ContainerVision is built on Phillips Connect's CargoVision platform and engineered specifically for shipping containers. It captures a rapid burst of images whenever a container's doors open, so if someone is moving cargo in or out, the camera catches the sequence as it unfolds rather than after the fact. It also identifies whether a person is present, what space remains inside the container, and whether there is equipment or dunnage inside.

"Shipping containers move through places like ports, rail yards and distribution centers before they reach their destinations, and now customers can see what is happening inside them," said Cliff Creech, senior vice president of operations at Phillips Connect. "ContainerVision gives customers eyes inside the container at the moments that matter, especially when the doors are opened unexpectedly."

ContainerVision is a solar-powered solution built to survive the container environment. It sits

behind a reinforced metal shield, securely fastened to the container, and mounted out of reach. This helps protect the camera from rough handling and makes it difficult to remove or disable. Beyond cargo security, ContainerVision provides precise measurements of floor space and volumetric utilization, along with dunnage detection, eliminating the need to physically check each container before deciding where it can be used next.

About Phillips Connect
Phillips Connect is a leader in smart trailer technology, giving fleets greater visibility into the location, health, utilization and cargo conditions of their trailers. The company's Connect1 platform brings together data from sensors, cameras and integrated technologies to help fleets protect freight, reduce downtime and make better operational decisions. Phillips Connect technology is used by some of the world's largest fleets to understand what is happening across their trailer operations and act on issues sooner. Headquartered in Irvine, California, Phillips Connect develops intelligent trailer solutions for the transportation industry. For more information, visit www.phillips-connect.com
