SEIL Expands International Engagement in Food Packaging Sector

SOUTH KOREA, September 15, 2026 /EINPresswire.com/ -- South Korean packaging company continues overseas industry activities as foodservice and packaging requirements evolve across international markets

South Korean food packaging company SEIL Co., Ltd. is continuing its international business activities as changes in foodservice, takeaway and retail markets create new requirements for packaging manufacturers and suppliers.

SEIL manufactures and distributes food packaging products using materials including PET, PP, PS and PLA, as well as paper and pulp-based materials. Its operations cover manufacturing, product development, distribution, logistics and sourcing.

The company has been expanding its contact with overseas markets through participation in international industry events and by developing packaging products for different foodservice applications.

Responding to Changes in Food Packaging

Food packaging requirements have changed alongside the growth of takeaway services, prepared foods and different forms of food retail.

For manufacturers, these changes involve more than the appearance of a container. Material selection, production consistency, storage, transportation and compatibility with different types of food are also part of the development process.

SEIL produces several categories of packaging, including PET and PP containers, paper and pulp

containers, injection-molded products, beverage cups and related items.

The company also develops products according to customer specifications. During development, factors such as intended use, material characteristics and mass-production requirements are considered before a product moves into production.

Working Across Different Packaging Materials

SEIL's product development covers both conventional plastic packaging and paper-based alternatives.

PET, PP, PS and PLA are used across different product categories, while paper and pulp materials provide additional options for foodservice applications.

The company also produces certain paper containers using post-consumer recycled materials.

Rather than relying on a single material category, SEIL's current product range reflects the different requirements found across foodservice, takeaway and retail applications.

International Industry Activities

SEIL has also participated in industry exhibitions outside South Korea as part of its overseas business activities.

The company participated in the 2024 National Restaurant Association Show in Chicago. Its more recent U.S. exhibition activities have included the Winter Fancy Food Show and PACK EXPO in Las Vegas in 2025.

Participation in these events has provided opportunities for the company to introduce its manufacturing capabilities and observe developments in the international food and packaging industries.

Alongside its exhibition activities, SEIL continues to operate manufacturing, warehouse and inventory management processes in South Korea.

Manufacturing and Management Systems

SEIL's manufacturing facilities include pressure and vacuum forming equipment and servo vacuum forming systems used in the production of food packaging containers.

The company also maintains quality and environmental management systems and lists ISO 9001 and ISO 14001 among its certifications.

As food packaging requirements continue to vary by product category and market, SEIL plans to continue developing its product portfolio and maintaining communication with distributors, foodservice companies and other industry participants in overseas markets.
