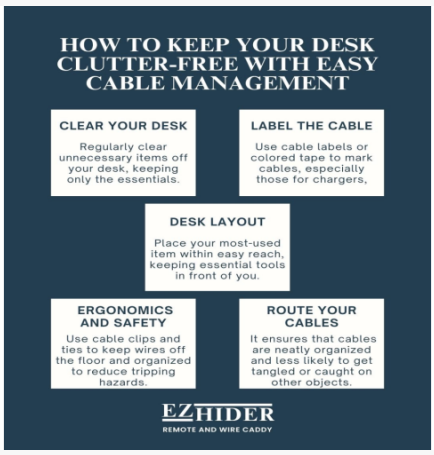
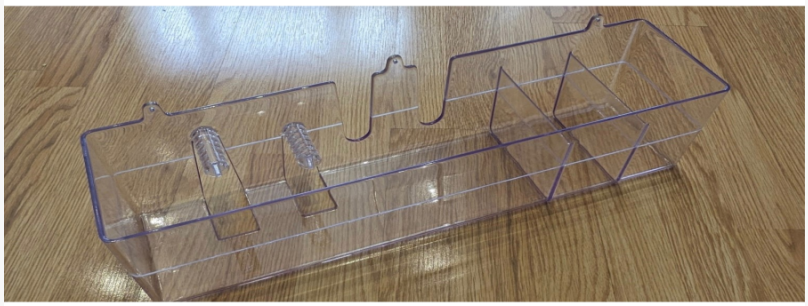
InventionHome® Inventor Creates Compact Enclosure for Concealing and Organizing Electronic Cables and Accessories

PITTSBURGH, PA, UNITED STATES, September 15, 2026 / EINPresswire.com/ -- Virginia P. of North Chesterfield, VA is the creator of the Remote and Wire Caddy, a compact storage enclosure designed to organize electronic device cables, surge protectors, remote controllers, and other small electronic accessories while reducing visible cable clutter. The enclosure can be positioned behind a television or computer monitor, mounted to a wall, or placed on the floor depending on the intended application and material configuration.





The system is intended for environments where multiple electronic devices are located in close proximity, including home entertainment areas, workspaces, offices, and computer stations. Loose power and signal cables can be routed into the enclosure to help prevent cables from becoming tangled while keeping excess wiring concealed from normal view. Remote controllers and other frequently used accessories can also be stored within the enclosure to provide a designated location when the devices are not in use.

For wall-mounted applications, the

enclosure can be secured behind a television or large computer monitor using screws or hook-and-loop fasteners. Positioning the enclosure behind the display allows the cable-management structure to remain largely concealed while providing access to wiring and stored accessories. A floor-based configuration can also be used to enclose cables positioned near the ground which helps reduce visible cable accumulation in areas where multiple electronic devices are connected.

The Remote and Wire Caddy may be manufactured from lightweight, durable plastic for wall-mounted applications or lightweight wood for certain floor-based configurations. Different sizes, colors, and enclosure designs may be provided to accommodate different electronic setups and installation environments. The adaptable mounting approach allows the product to be configured according to the available space and the user's preferred method of installation.

Key features and benefits include:

- Cable storage enclosure: Provides a centralized location for loose electronic cables and wiring.
- Concealed installation: Can be positioned behind televisions and computer monitors to keep cables out of normal view.
- Multiple mounting methods: Supports installation using screws or hook-and-loop fasteners.
- Tangle reduction: Keeps loose cables contained and separated from other objects that could contribute to cable tangling.

• Configurable sizing: Can be manufactured in multiple sizes to accommodate different quantities of cables and electronic accessories.

Remote and Wire Caddy addresses a common cable-management issue created by the increasing number of electronic devices used within homes and workspaces. The enclosure provides a single location for items that might otherwise remain scattered around a television, computer workstation, or other electronic installation. In addition to improving visual organization, containing cables near their associated electronic equipment can help keep loose wiring off walking surfaces and reduce the likelihood of cables becoming scattered throughout a room.

Virginia was issued her Utility Patent from the United States Patent and Trademark Office (USPTO) and is working closely with InventionHome, a leading invention licensing firm, to sell or license the patent rights to her Remote and Wire Caddy product. Ideal licensing candidates would be U.S. based product manufacturers or distributors looking to further develop and distribute this product innovation.

Companies interested in the Remote and Wire Caddy can contact InventionHome at member@inventionhome.com. Inventors currently looking for assistance in patenting, marketing, or licensing their invention can request information from InventionHome at info@inventionhome.com or by calling
1-866-844-6512.

About InventionHome®

InventionHome® is a top-rated invention marketing and product licensing company dedicated to helping inventors successfully patent, prototype, and promote their new product ideas. From securing intellectual property to connecting with potential licensees, InventionHome® offers a streamlined path to commercialization. Learn more at https://www.inventionhome.com or email info@inventionhome.com.
