Minnetonka-based MSP debuts a private, SOC 2-compliant managed AI platform with a 90-day implementation roadmap, built for financial services, manufacturing, and commercial construction firms across the Twin Cities.

Veracity Technologies, a Minnetonka-based managed IT services and cybersecurity provider serving the Twin Cities, today announced the launch of Secure Managed AI as a Service (AIaaS), a fully managed program that gives Minneapolis-area businesses access to enterprise-grade artificial intelligence inside a private, closed-loop environment designed for high-compliance industries.

Unlike public AI tools, Veracity's AIaaS platform keeps company data strictly confidential. Client information is never used to train public models. The platform is SOC 2-compliant and built to meet the standards of organizations operating under SEC, HIPAA, and other regulatory frameworks, making it a fit for financial services companies, manufacturers, and commercial construction firms that have held back on AI adoption over data security concerns.

"Most business leaders we talk to know AI can save their teams serious time, but they can't risk putting client data into public tools," said Todd Friesen, [TITLE] of Veracity Technologies and co-author of the Amazon bestseller Mastering AI for Business Success. "AIaaS removes that barrier. We deploy a private AI environment, train the team on it, and manage it the same way we manage the rest of a client's technology: securely, and with measurable results."

The service follows a structured 90-day implementation roadmap. During the first 30 days, the Discover and Secure phase, Veracity deploys the client's private AI environment, runs a Use-Case

Workshop to identify the highest-value opportunities, and establishes AI security guidelines. In the Build and Train phase, days 30 through 60, the team builds custom AI assistants and automated workflows for role-specific needs, from finance operations to construction project management and supply chain optimization, paired with hands-on prompt engineering training. From day 60 onward, the Scale and Optimize phase measures ROI, scales the automations that prove out, and provides ongoing AI Office Hours support so adoption sticks.

Veracity reports that clients on the program typically see more than 100 hours saved per month, team adoption rates above 80 percent, and a three to five times return on investment.

The launch extends Veracity Technologies' track record supporting regulated businesses across Minnesota. The company was named to CRN's 2026 MSP 500, recognized as a 2025 Channel Partners MSP 501 winner, and honored as an MSP Titan of the Industry for its work in finance and banking.

Secure Managed AI as a Service is available now to businesses throughout Minneapolis, St. Paul, and the greater Twin Cities metro, including Minnetonka, Bloomington, Plymouth, Maple Grove, Eden Prairie, Woodbury, Eagan, and Burnsville. Prospective clients can book a free AI strategy consultation to receive a customized AI readiness assessment.
