NAVEX Advances Disclosure Management with AI-Powered Review and Connected Risk Intelligence

LAKE OSWEGO, OR, UNITED STATES, September 16, 2026 /EINPresswire.com/ -- NAVEX, the global leader in integrated risk and compliance management software, today announced new capabilities in NAVEX One Disclosure Management to help compliance teams connect disclosure history, understand how reviews progressed and route submissions more precisely. This gives organizations a clearer, more consistent view of employee-based risk and helps reviewers focus their attention where judgment matters most.

By bringing that information and workflow together, the capabilities reduce the time teams spend searching for context, reconstructing review activity and manually directing disclosures.

“Disclosure programs generate valuable signals about employee-based risk, but those signals become harder to interpret when information is spread across individual records, reviewers and points in time,” said Raj Sethuraman, President and Chief Product and Technology Officer at NAVEX. “These enhancements bring greater intelligence and continuity to the disclosure process, helping compliance teams reduce administrative work and focus on the decisions that require their expertise."

The new capabilities include:

Related disclosures: Connects disclosures involving the same employee, situation or underlying risk, bringing relevant history together so reviewers can assess whether an issue is new, recurring or evolving without relying on spreadsheets, offline notes or institutional knowledge.

AI-assisted disclosure review summary: Uses AI to turn detailed disclosure history into a concise narrative of how a disclosure moved through the review process, including who reviewed it, what actions were taken, when they occurred and, when available, relevant context from review notes, while preserving the underlying disclosure history as the authoritative audit trail.

Enhanced rules-based routing: Gives administrators greater precision in directing disclosures by considering multiple conditions, such as an employee’s role and disclosure type, to determine the appropriate reviewer or team and reduce manual routing in complex organizational structures.

Together, these capabilities help customers build disclosure programs that are easier to manage, more consistent over time and better equipped to identify changing employee-based risk.

These new solutions reflect NAVEX's ongoing, strategic investment in its portfolio - delivering AI and automation, intuitive experiences, and connected intelligence across the full suite of NAVEX products and the NAVEX One platform. Together, these investments help compliance professionals see risk more clearly, act faster and focus their expertise where it matters most.

About NAVEX
