Trucent to Showcase Consistent Solids Separation at GlassBuild America 2026

Cleaner grinding fluid helps glass fabricators improve edgework, reduce maintenance and waste, and keep production moving.

Trucent CentraSep S-Series provides continuous solids separation for grinding fluid in glass fabrication applications.

NOBLESVILLE, IN, UNITED STATES, September 16, 2026 /EINPresswire.com/ -- Trucent Separation Technologies will exhibit at GlassBuild America 2026, September 23–25, showcasing centrifugal separation solutions designed to help glass fabricators maintain cleaner grinding fluid, reduce maintenance, and improve process consistency.

Glass grinding continually introduces fine solids into process fluid. When those solids remain in circulation, they can affect fluid performance, glass quality, maintenance requirements, and production efficiency. Trucent separation systems continually remove grinding solids from the fluid, helping fabricators maintain cleaner coolant throughout production.

“Clean grinding fluid is an important part of a consistent glass fabrication process,” said Michael Ondrus, Key Account Manager. “By continually removing solids, fabricators can spend less time managing their fluid and more time keeping production moving.”

At GlassBuild, Trucent will feature its CentraSep® S-Series, a centrifugal separation system widely used in glass-processing applications. The system continuously removes solids without consumable filter media, reducing filter changes, fluid maintenance, and waste while extending the useful life of process fluid.

Cleaner grinding fluid can help glass fabricators:

- Support better edgework and reduce rejects
- Extend grinding fluid life
- Reduce fluid replacement and waste
- Reduce hands-on maintenance and labor
- Minimize production interruptions
- Improve overall process consistency

Trucent representatives will be available throughout the show to discuss glass grinding and fabrication applications and help manufacturers evaluate opportunities to improve fluid management and solids separation within their processes.

Every solution begins with a conversation. Speak with Trucent at GlassBuild America 2026, September 23–25, at Booth #3271. Visit Trucent.com/glass for more information on filtration, separation, and purification systems designed for your unique process.

The Trucent engineering team designs and tests fluid separation systems that consistently maintain cleaner process fluid by removing grinding solids in glass fabrication.
