Everything Attachments Introduces Round-DOM Rock Bucket Purpose-Built for Compact Tractors

New Wicked Rock Bucket brings true round-tine rock sifting performance to compact tractors without the weight penalty of traditional solid-bar designs

Everything Attachments Compact Tractor Rock Bucket

CONOVER, NC, UNITED STATES, September 18, 2026 / EINPresswire.com/ -- Everything Attachments, a North Carolina manufacturer of premium tractor and skid steer attachments, has introduced the new Wicked Rock Bucket for Compact Tractors, a purpose-built rock bucket that replaces the conventional flat steel tines commonly found on compact tractor skeleton buckets with a lightweight round-DOM tine system.

The result is a fundamentally different approach to handling, separating and sifting rocks with a compact tractor.

Traditional compact tractor skeleton buckets typically rely on flat steel tines. While simple to manufacture, the parallel flat surfaces can create extended pinch points where rocks become tightly wedged between adjacent tines.

Everything Attachments designed the Wicked Rock Bucket around 1.25-inch outside-diameter DOM tubing, creating round working surfaces that greatly reduce the area where a rock can become pinched between the tines. The design allows properly sized material to pass through the bucket rather than becoming lodged between long, opposing flat surfaces.

The round-tine concept has long been used in heavier rock buckets designed for skid steers and larger equipment, but those designs commonly rely on heavy solid steel bar. Everything Attachments approached the problem specifically for the compact tractor market, where attachment weight directly reduces the amount of material the tractor can lift.

Instead of simply shrinking a heavy-equipment rock bucket, Everything Attachments engineered a new version around hollow DOM tubing, preserving the benefits of round tines while dramatically reducing unnecessary attachment weight.

A 60-inch Wicked Rock Bucket with 2-inch tine spacing weighs approximately 380 pounds while providing an approximately 36-inch-deep, 23-inch-high working area, giving compact tractor owners substantial bucket capacity without consuming a disproportionate amount of their loader's available lift capacity.

According to Everything Attachments, the company believes the Wicked Rock Bucket is the first commercially produced round-DOM rock bucket engineered specifically around the requirements of compact tractors.

Built Around the Tine

The round DOM tines are not simply welded onto the front of the bucket. Each tube passes through the main lower structural tube and is welded on both sides to create an integrated structure.

At the working end of each tine, Everything Attachments developed a replaceable press-fit tapered point, providing a finished leading edge that can be serviced rather than requiring replacement of the complete tine.

The DOM structure is reinforced with 3/16-inch Hardox 500 bracing, while additional guarding and frame support incorporate 1/8-inch Hardox 500, an abrasion-resistant steel selected for demanding wear environments.

The quick-attach backing plate also incorporates approximately 15 degrees of additional rollback, helping operators retain material while loading and transporting rocks.

Designed for Compact Tractor Owners

The Wicked Rock Bucket is available in widths ranging from 48 to 72 inches with standard 2-inch or 3-inch tine spacing. Custom tine spacing is also available for specialized sifting applications.

Mounting configurations include Universal Skid Steer Quick Attach, John Deere Quick Attach, Mini Skid Steer Quick Attach and select pin-on configurations, making the bucket compatible with a broad range of compact tractor brands and loader systems.

Everything Attachments designed and manufactures its Wicked attachments in Conover, North Carolina, using American steel and precision manufacturing processes.

The new Wicked Rock Bucket expands the company's line of lightweight, high-strength attachments engineered specifically to preserve the working capacity of compact tractors rather than adapting products originally intended for larger machines.

Key features include:

1.25-inch OD round DOM sifting tines
Approximately 36-inch bucket depth
Approximately 23-inch bucket height
48- to 72-inch available widths
Standard 2-inch and 3-inch tine spacing
Custom tine spacing available
Replaceable press-fit tapered tine points
Hardox 500 tine bracing and protective structure
DOM tines extending through the main lower tube and welded on both sides
Approximately 15 degrees of additional rollback built into the quick-attach structure
Multiple tractor and loader mounting configurations
Manufactured in Conover, North Carolina

About Everything Attachments

Everything Attachments designs, manufactures and distributes tractor, skid steer, mini skid steer and excavator attachments from its facility in Conover, North Carolina. The company's Wicked product line focuses on American-made attachments engineered for high strength, reduced weight and demanding real-world applications.
