Vuret Telehealth Platform Now Offers Licensed Provider Evaluations for Toenail Fungus and Hyperhidrosis

The platform connects patients with licensed U.S. healthcare providers and licensed U.S. pharmacies. A prescription is required for all medication.

SHERIDAN, WY, UNITED STATES, September 21, 2026 /EINPresswire.com/ -- Vuret, a U.S.-based telehealth platform, announced that it now offers online evaluations by licensed U.S. healthcare providers for two conditions: onychomycosis, commonly known as toenail fungus, and hyperhidrosis, a condition marked by excessive sweating. A valid prescription from a licensed provider is required for all medication obtained through the platform, and no medication can be purchased without one.

> “Every order starts with a clinical evaluation. The provider decides whether treatment is appropriate, and the pharmacy fills the prescription when approved.”
>

What the Platform Is

Vuret is a platform, not a pharmacy. It does not sell medication over the counter, does not make prescribing decisions, and does not prepare or dispense medication. Its role is to connect three parties: patients seeking care, licensed U.S. healthcare providers who evaluate them, and licensed U.S. pharmacies that fill any resulting prescriptions. Clinical decisions remain with the provider, and dispensing remains with the pharmacy.

How the Process Works

A patient begins by completing an online health questionnaire that covers the condition, symptoms, and medical history. A licensed provider reviews the submission and determines whether prescription treatment is medically appropriate. If the provider approves treatment, a prescription is sent to a licensed U.S. pharmacy, which prepares the medication and ships it to the patient. If the provider determines that treatment is not appropriate, no prescription is issued and no medication is dispensed.

"Every order on the platform starts with a real clinical evaluation," said a spokesperson of Vuret.

"Patients cannot buy their way past that step. The provider decides, and the pharmacy fills. The platform's role is to keep that chain clear and easy to follow."

Vuret Toenail Fungus Medication

The Conditions

Onychomycosis is a fungal infection of the nail that can cause discoloration, thickening, and brittleness. Hyperhidrosis is sweating beyond what the body needs to regulate temperature, and it commonly affects the underarms, hands, and feet.

"Many people live with these conditions for a long time before seeking care, often because of embarrassment or the difficulty of scheduling an office visit," "An online evaluation lets a patient describe the condition privately, from home, and have a licensed provider review it."

Compounded Medications

Prescriptions written through the platform are for compounded topical medications. Compounded medications are prepared by licensed pharmacies according to a provider's specifications and are distinct from FDA-approved branded products.

For onychomycosis, providers on the platform may prescribe one of two compounded topical formulations. One combines itraconazole and terbinafine, and the other combines efinaconazole and ciclopirox olamine. Both are applied directly to the affected nail. For hyperhidrosis, providers may prescribe a topical containing glycopyrrolate.

Compounded medications are not FDA-approved, and the FDA has not evaluated them for safety, effectiveness, or quality. Vuret makes no claim that compounded medications perform better than FDA-approved products. The provider determines whether a compounded medication is appropriate for an individual patient.

Payment Model

The platform operates entirely on a cash-pay basis and does not bill insurance. Patients pay

directly, and no insurance claim is submitted.

"Insurance plans frequently do not cover compounded medications, which can leave patients dealing with denials and appeals," "In our view, a cash-pay model is simpler. The price shown is the price paid, and because no claim is filed, treatment stays between the patient and the provider."

About Vuret:
Vuret is a U.S.-based telehealth platform that connects patients with licensed healthcare providers for online medical evaluations. Vuret is not a pharmacy. A prescription from a licensed provider is required for all medication. When a provider approves treatment, prescriptions are filled by licensed U.S. pharmacies and shipped to the patient. Vuret currently offers access to provider-prescribed compounded topical treatments for toenail fungus and hyperhidrosis. Compounded medications are not FDA-approved and have not been evaluated by the FDA for safety, effectiveness, or quality.
