

# Intoxalock® Begins Servicing Ignition Interlock Clients Directly in Washington State

/EINPresswire.com/ New partnership offers more exclusive services and meets new state legislation requirements

DES MOINES, IOWA - 2013 has been a big year for Intoxalock®, which provides innovative technology through its line of [alcohol monitoring](#) devices. In addition to celebrating its 20th anniversary in January, the company also announced that they have begun directly servicing customers and clients in Washington State. The Intoxalock device was previously only available through a distributor.

This direct service partnership helps provide a smoother transition with various consumer processes for Intoxalock users. In addition to a rapidly expanding service network, Intoxalock also offers an efficient Quick Exchange program for state-mandated recalibrations, as well as 24-hour online account access that allows customers to track shipments, make payments, and manage their account.

“Intoxalock is very excited to work with the great state of Washington for our new client partnership,” said Dave Arringdale, CEO of Intoxalock. “We are also pleased that the state has implemented a new law that not only helps promote responsibility, but also accountability in keeping drivers and passengers safe.”

In addition to already-mandatory [ignition interlock devices](#) required for any driver with prior alcohol-related offenses, legislation introduced on January 1st by Washington State now requires cameras for any driver who uses an [in-car breathalyzer](#). This technology captures a snapshot of the driver each time it is used. Intoxalock began offering this feature on its Mobile eLERT™ (Electronic Live Event Reporting Technology) device in 2010 and is currently being used for Intoxalock installed drivers in New York, Michigan, Minnesota, Texas, and Vermont.

To use the Intoxalock, a driver simply pushes a button, submits their breath sample, and waits for the LED screen to display passed or failed. If the driver passes, they can start the car and head to their destination. If a driver doesn't pass, they will be unable to start the car until a passing breath sample is provided.

About The Company:

Headquartered in Des Moines, Iowa, Intoxalock (<http://www.intoxalock.com>) developed its state-

of-the-art alcohol monitoring device in conjunction with researchers from Iowa State University. They continue to actively work to advance the ignition interlock device and home alcohol monitoring industries with technology that suits the needs of various federal and state requirements.
