Dr.Look Ai Launches CapaLeap to Put Children's Ideas First in AI Creation

CapaLeap combines the CapaStudio AI Agent platform, age-specific devices and partners to support curiosity, learning and creation for ages 3–18.

Meet CapaCap ?□ An AI-powered curiosity companion for kids who have a world of "whys" to explore.

Big ideas start small. □ Meet CapaLeap brand, a creative brand designed to help children turn ideas into action.

HANGZHOU, ZHEJIANG, CHINA, September 23, 2026 / EINPresswire.com/ -- During the 2026 Apsara Conference, Dr.Look Ai held its "Leap Into the Future" global brand and ecosystem launch event, where it introduced CapaLeap.

Designed for children and teenagers ages 3 to 18, CapaLeap brings together the CapaStudio AI Agent platform, a range of age-specific devices and an ecosystem of content partners. Its guiding idea is "Vibe Creating": children lead with their own ideas, while AI helps them bring those ideas to life.

The launch marks Dr.Look Ai's expansion from children's smart hardware, led by its AI learning camera, toward a broader product lineup spanning different ages, devices and stages of growth.

Children's Ideas at the Center

When AI can provide information and answers in seconds, children need opportunities to observe, ask questions, form their own judgments and create something of their own.

That belief is behind CapaLeap's approach to Vibe Creating. Children remain in charge of what they think, choose and make. AI helps find tools, break down tasks and carry out ideas, turning a moment of curiosity or a question into something they can create.

“Vibe Creating is not a feature. It is CapaLeap’s answer to what AI for children should be,” said Kun Y., founder and CEO of Dr.Look Ai.

CapaLeap aims to put children in the role of thinkers and creators from the start. Its vision is to use AI to inspire their limitless potential.

One AI Platform, Multiple Devices
CapaLeap’s product architecture is built around one AI platform, multiple devices and a wider partner ecosystem.

The platform: CapaStudio is an AI Agent platform designed for children. It provides capabilities such as guided follow-up questions, task planning, knowledge support and creative assistance across devices for different ages. A planned feature, Capa Memory, is intended to connect children’s interests, expressions, creations and developmental milestones across devices and over time.

The devices: CapaLeap’s age-specific lineup includes CapaCap, CapaSnap and CapaNote, with CapaPrint serving as a companion output device.

Every child’s imagination has somewhere new to go.
Meet CapaLeap, created to help kids explore, create, and grow with AI.

Dr.Look Ai logo

Meet CapaLeap -- A new name for a world of possibilities, where children explore, create, and grow with AI.

CapaCap, for ages 3 to 6, is an AI camera designed to spark early curiosity and give young children a way to explore their many “whys.”
CapaSnap, for ages 5 to 9, builds on real-world exploration with tools that support understanding, expression and learning.
CapaPrint is a companion output device for the product lineup.
CapaCap, CapaSnap and CapaPrint went on sale alongside the launch event.

The event also marked the first public appearance of CapaNote, a device for independent learning and creation designed for ages 6 to 16. It is being developed around on-the-go understanding, project-based exploration and creative work. Its release date, price and final features will be announced through official channels.

The ecosystem: CapaLeap is opening its platform to partners in education, brands and intellectual property, culture and tourism, distribution, development and content creation. The goal is to bring high-quality content and real-world experiences into children's exploration and creative work.

Building a Partner Ecosystem

Dr.Look Ai has already worked with schools in Shenzhen and Zhanjiang, as well as partners including Shenzhen's Fairy Lake Botanical Garden, to bring children's AI products into educational, nature learning and real-world exploration settings.

At the September 22 event, Dr.Look Ai signed a deeper cooperation agreement with Alibaba Cloud. It also announced plans to work with Silicon Memory on long-term memory infrastructure for children's and teenagers' AI experiences.

"Our collaboration with Dr.Look Ai goes beyond integrating a technical capability," said Xiaozhe W., founder and CEO of Silicon Memory. "Through the Memory Lab data platform and Memory Echo memory orchestration engine, we hope to help CapaStudio build memory capabilities that can understand and carry forward children's interests, expressions, creations and developmental milestones over time."

Building on these existing projects and new technology partnerships, CapaLeap also opened its CapaLeap Partner program. The program aims to connect parents, schools, educational institutions, brands, IP owners, culture and tourism partners, distributors, developers and content creators.

Growing With Families

According to figures shared at the event, Dr.Look Ai products have reached 220,000 families over the past 20 months. Children spend about 45 minutes a day using the products by choice, and 46% of users are still using them after six months.

This user base provides a foundation for CapaLeap's expansion from a single hardware product into a connected lineup for ages 3 to 18. By combining age-specific devices with shared AI Agent capabilities and a continuous record of growth, CapaLeap hopes to build a relationship with families that lasts beyond a single device purchase.

Safety by Default

For products used by children, CapaLeap has adopted three principles: safe by default, controlled by default and age-appropriate by default. It aims to establish clear boundaries through safeguards for content and privacy, alongside parental controls. Safety is a basic

requirement for children’s AI products.

As children grow, their devices and needs will change. CapaLeap’s goal is to let their interests, creations and progress carry forward—while keeping children in charge of the direction they take.

About CapaLeap
CapaLeap is an AI Agent platform and device brand for children and teenagers ages 3 to 18, launched by Dr.Look Ai. Guided by the idea of Vibe Creating, it aims to use AI to inspire children’s limitless potential. Please learn more at: https://capaleap.ai/en
