

Voice biometrics helps to easily design, build and deploy secure authentication steps into business processes!

/EINPresswire.com/ [USoft](#) launches new Voice enabled BPM software at the Gartner BPM conference in London on March 13, 2013. BPM software provider USoft continues to deliver more innovation by incorporating speaker recognition voice biometrics technology into its BPM software. The function enables BPM application developers to easily design, build and deploy secure authentication steps into business processes. "Imagine you need your manager's approval for your next car rental. Your manager receives a call, speaks a few words, his/her voice is authenticated by the system, and your car rental is approved. By using USoft BPM software, you can very quickly incorporate enhanced security and great user experience in your enterprise applications" said Roel Spans CEO of USoft.

"Voice authentication is a convenient and secure authentication method preferred by the mobile workforce today" said Dr. Tariq Habib CEO of [VoiceTrust](#). "We are very excited to be working with USoft and jointly addressing market demand for proven and effective innovation.

About USoft B.V.

The software of USoft enables individuals and organizations to (structure, integrate, manage and maintain) enterprise architecture, business processes and business requirements in an unambiguous, consistent and coherent manner. As a result organizations are able to compose business applications instead of coding the specifications by hand. The software is currently used by more than 10.000 users worldwide at organizations such as AgentschapNL, AkerSolutions, ITV, KLM, Schiphol Group, Skyteam and Sandd.
