Diligence Desk™ Launches to Audit Public Claims Against the Evidence

New evidence-audit org examines health, technology and business claims using primary documents, regulatory filings, scientific research and direct questions.

SAN FRANCISCO, CA, UNITED STATES, September 29, 2026 / EINPresswire.com/ -- Diligence Desk™ has launched as an independent evidence-audit organization created to examine a growing problem in modern information:
Claims can now travel around the world in minutes, while determining whether those claims are actually supported by evidence can take days, weeks or considerably longer.

Companies, entrepreneurs, researchers, health organizations and public figures can communicate directly to millions of people through websites, press releases, social media, podcasts and online publications.

> The world does not need more opinions. It needs more people willing to open the documents, examine the evidence and ask the next question."
>
> *Dr. Surinder Kumar*

The ability to make a claim has never been easier.

The ability of the public to independently examine the evidence behind that claim has not kept pace.

Diligence Desk™ was created to address that gap.

Rather than beginning with an opinion about whether a claim is true or false, Diligence Desk conducts what it calls an Evidence Audit.

An Evidence Audit starts with the claim itself and works backward toward the underlying evidence.

Image showing diligent investigation of documents and claims

That may include scientific publications, regulatory records, FDA documents, SEC filings, patents, corporate disclosures, clinical studies, financial statements, public records and other primary-source materials.

When important information is missing, Diligence Desk identifies what is missing and may submit specific questions directly to the company or organization making the claim.

“Claims now move at the speed of social media. Evidence does not,” said Dr. Surinder Kumar of Diligence Desk. “A statement can be repeated thousands of times before anyone opens the scientific paper, reads the regulatory filing or examines what the source document actually says.”

The organization is built around a simple principle:
The stronger the claim, the stronger the evidence should be.

Diligence Desk™ distinguishes its work from conventional commentary and online debate by concentrating on documentation.

The objective is not to tell readers what to believe. It is to place the claim and the available evidence next to each other so readers, journalists, investors, physicians, researchers and consumers can examine the discrepancy—or agreement—for themselves.

That distinction is increasingly important in areas such as health and wellness, artificial intelligence, medical technology, biotechnology, investment and consumer technology, where complex scientific or financial claims may be compressed into simple marketing messages.

“A 20-word marketing statement may depend on a 200-page regulatory filing, several scientific studies and a set of assumptions that the reader never sees,” Kumar said. “Diligence Desk exists to open that file.”

Evidence Audits may examine questions such as:
What exactly is being claimed?
What evidence has been offered to support it?

Does the cited research actually support the public statement?
What do regulatory filings or other primary documents say?
What important information has not been disclosed?
Has the organization making the claim been given an opportunity to respond?

Diligence Desk™ also preserves the distinction between an unanswered question and a proven conclusion.

A lack of publicly available evidence does not automatically establish that a claim is false. It establishes that additional evidence may be necessary before the claim can be independently substantiated.

That discipline is central to the organization's approach.

“The world does not need more opinions,” Kumar said. “It needs more people willing to open the documents, examine the evidence and ask the next question.”

About Diligence Desk™:

Diligence Desk™ is an independent evidence-audit organization examining significant claims in health, science, technology, business and related fields. Its investigations begin with publicly stated claims and examine the primary documents, scientific evidence, regulatory records and other materials available to support them.

Diligence Desk™ publishes its findings, identifies gaps in the available evidence and, where appropriate, submits questions directly to the organizations responsible for the claims.
