

Arizona-Based Gallus Detox Centers Announces Opening of Second Texas Facility

/EINPresswire.com/ [Gallus](#) Detox Centers, established in March 2011 in Prescott, Arizona, announces the opening of its second facility in Texas. "Our newest center in Aubrey will continue our mission of small, medical drug and [alcohol detox](#) facilities providing unparalleled patient care."

DALLAS, TEXAS -- Gallus Detox Centers, based in Prescott, Arizona, announces the opening of its second facility in Texas. "Our newest center in Aubrey will continue our mission of small, medical drug and alcohol detox facilities providing unparalleled patient care, excellent service and upscale amenities including private rooms and gourmet meals. After opening in Houston, there were inquiries about offering [medical detox](#) near Dallas, so we're excited to begin accepting patients in April," says Dave Long, Business Director.

Most detox treatment is provided in rehab focused facilities, offering only "cold-turkey" or holistic methods for this critical phase. Gallus Detox is among the few nationwide providing medically managed treatment monitored 24/7 by a medical team. The Gallus Detox Method is dedicated to patient safety and alleviating uncomfortable and potentially life-threatening withdrawal symptoms. This unique method was developed by Dr. Patrick Gallus. "At Gallus detox centers, every patient receives a treatment plan designed for that person's needs, emotions, substances of abuse, and outside concerns. The customized detox program is implemented by board certified physicians, registered nurses and mental health professionals," Dr. Gallus says. "When asked about the typical length of stay, the average is 4.5 days but each patient is unique. Unlike most detox facilities who isolate their patients, cutting them off from the outside world, Gallus provides HDTV and Wifi and encourages patients to stay in touch with family and friends for added support. "

The Gallus Detox treatment program is based on many factors that change constantly during treatment. Through the use of intravenous medication, cardiac monitoring and 24-hour video monitoring, the medical team is able to adapt to the patient's specific needs on a moment's notice to ensure utmost safety and comfort. The ability to respond quickly throughout treatment is a decided advantage over slow-acting oral medications used in some facilities. Detoxing from alcohol or drug abuse safely and comfortably is essential to a patient's positive outcome and attitude toward the future. At Gallus Detox Centers, we always assist our patients with planning for after-care and the next step on their road to recovery.

Dr. Patrick Gallus is available to all media outlets for interviews or questions.
