

ToConceive Launches Information-Oriented Website

/EINPresswire.com/ New ToConceive website provides helpful information on the conception process

Traveling down the road of trying to conceive often involves huge investments of time and money and for the one in eight couples dealing with infertility it can take a huge emotional toll as well. Many couples know and understand the basics of conception, but lack specific knowledge about the very complicated conception process in general and how it pertains to their particular situation.

Enter in [Key to Conceive](#), a new and revamped website from ToConceive that offers new and helpful information about conception, pregnancy and infertility. Easy to navigate and user-friendly, the website presents information in simplified language for ease of comprehension. ToConceive's Key to Conceive website features information compiled from a variety of legitimate sources, including the Centers for Disease Control, U.S. National Library of Medicine, National Institutes of Health and Dr. Ron Thompson, the developer of ToConceive who has over 30 years infertility experience and five U.S. patents for gynecological devices and procedures.

"For over 30 years, I have attempted to help women achieve conception, pregnancy, and motherhood, along with educating them about the conception process," said Dr. Thompson. "ToConceive has already helped hundreds of women achieve conception, and now has the opportunity to educate couples and help thousands of women worldwide to achieve conception, pregnancy, and motherhood."

Specific topics the website covers include [male subfertility](#), unexplained infertility, [sperm capacitation](#), natural conception lubrication and the conception process. The website contains professionally created videos discussing male subfertility, the conception process and conception tips, along with in-depth written articles about the same topics. In addition, visitors to the Key to Conceive website will benefit from the Key to Conceive blog, offering a personal look at infertility, the trying to conceive journey, pregnancy and parenthood.

Whether just starting the trying to conceive journey or embattled with infertility issues for many years, couples at all stages will benefit from the information offered by Key to Conceive and the ToConceive website (<http://www.keytoconceive.com>).

ToConceive, LLC was established by Dr. Ronald Thompson, OBGYN and inventor of numerous gynecological products and methods. Dr. Thompson holds five United States patents, including fallopian tube method of in vitro fertilization and embryo transfer, device for retrieval of ovum, embryo transfer arrangement, intrauterine delivery arrangement and in-vitro fertilization procedure using direct vision.
