

# Red Light Cameras: Do They Really Save Lives?

---

/EINPresswire.com/ 1-800-Car-Wreck Dallas car wreck lawyers chime in on the debate about the usefulness of red light cameras.

Dallas, TX - Many cities throughout the U.S. have implemented red light camera systems in an effort to reduce the number of traffic violations and potentially save lives in the prevention of [auto accidents](#). The outcome has led to a much heated debate on whether these systems actually work for the purposes for which they were intended. Some reports indicate red light camera systems only benefit the counties or cities where they have been installed financially, but others insist that the real benefit is provided to the public.

The [Dallas car wreck attorneys](#) of 1-800-Car-Wreck are in favor of research that supports the idea that red light camera systems can help prevent traffic accidents and potentially save lives. Various studies have shown that these systems have contributed to a significant decline in the number of fatal accidents occurring at intersections throughout various cities across the U.S., including Dallas and surrounding areas. These types of accidents frequently involve fatalities because of the position of impact when a collision occurs. Commonly referred to as T-bone crashes, where vehicles are hit from the side, these accidents often yield the most serious of car crash injuries.

Public safety is always of the utmost importance when it comes to designing traffic laws. Unfortunately, in spite of any measure taken on the part of a governing agency, accidents still occur and many people are still left hurt as a result. For those who have been injured in a Dallas car accident of any type, they may be eligible for compensation if their accident was caused by the negligence or wrongful actions of another driver.

The [Dallas car accident lawyers](#) of 1-800-Car-Wreck are available for injured accident victims and can provide a free case evaluation or in person consultation upon request. Contact the law firm of Eberstein & Witherite today.
