CodeClouds Launches Free AsterMD Beta for Companies Building New Telehealth Platforms

CodeClouds is opening beta access for AsterMD, its new API-first telehealth platform, with up to 6 months of free access and reduced-cost engineering support.

The CodeClouds Team

FORT WAYNE, IN, UNITED STATES, September 29, 2026 / EINPresswire.com/ -- CodeClouds has opened beta opportunities for AsterMD, its new headless, API-first telehealth platform designed to help healthcare businesses launch and operate telehealth services without having to build the underlying infrastructure from scratch.

As part of the beta program, qualifying businesses can receive AsterMD platform access free for as long as 6 months. CodeClouds is also making its engineering teams available to beta customers at reduced rates for custom development, integrations, and other technical work needed to connect AsterMD with their existing systems.

> One of the biggest barriers to launching a telehealth business isn't necessarily the idea or even the patient experience. It's everything that has to connect behind it."

The goal is to give telehealth businesses an opportunity to build around the platform at a substantially lower initial cost while giving the AsterMD team the opportunity to work closely with early customers as the product continues to mature.

"One of the biggest barriers to launching a telehealth business isn't necessarily the idea or even the patient experience. It's everything that has to connect behind it," said Kinkar Saha, 'Chief Disruptor' at CodeClouds. "You have provider networks, pharmacies, patient records, identity verification, payments, fulfillment, marketing systems, and dozens of other moving pieces. We built AsterMD so companies don't have to start from zero every time."

An API-First Foundation for Telehealth

AsterMD was developed by CodeClouds as a headless telehealth platform, providing the backend functionality needed to manage the patient journey while allowing businesses to build or connect the frontend experience that works best for their brand.

The platform is designed to support the process from the initial landing page and patient pre-qualification through checkout, intake, identity verification, provider consultation, prescription management, and pharmacy fulfillment.

AsterMD also includes patient and medical record management, a secure patient portal, treatment management, customizable intake forms, analytics and reporting, automation tools, and integrations with a growing network of healthcare and technology providers.

Rather than requiring businesses to operate within a completely closed ecosystem, its API-first approach allows companies to connect AsterMD with their existing applications, websites, CRMs, payment platforms, marketing tools, pharmacies, doctor networks, and other services.

“We didn’t want to build another telehealth platform where using the platform means rebuilding your entire business around somebody else’s software,” said Josh Warfel, Director of Sales at CodeClouds. “AsterMD is meant to provide the infrastructure and workflows that most telehealth companies need while still giving developers the freedom to build the experience and integrations their business requires.”

Beta Customers Can Receive Up to 6 Months Free

CodeClouds is currently offering several beta arrangements for companies interested in adopting AsterMD ahead of its wider release.

Depending on the business and its requirements, beta participants may qualify for as much as 6 months of platform access at no cost.

The extended beta period is intended to make it easier for both new and established telehealth companies to evaluate AsterMD in a real operating environment without immediately taking on the full cost of another software platform.

It also gives CodeClouds an opportunity to work directly with businesses using AsterMD in different configurations and continue refining the platform around real-world telehealth workflows.

The company is particularly interested in working with businesses that need to connect multiple providers, pharmacies, sales platforms, marketing systems, or other third-party services.

Lower-Cost Engineering Support for Custom Integrations

Some companies may have an existing frontend they want to preserve. Others may use a specialized CRM, pharmacy, provider network, fulfillment system, payment workflow, or internal application that needs to communicate with AsterMD.

For beta customers requiring additional work that don't have an internal development team, CodeClouds is offering its engineers at reduced rates for AsterMD-related integrations and custom development.

"We expect some customers to be able to connect AsterMD and get moving very quickly, while others are going to have something unique about their business that requires development," said Pal. "During the beta, we want to make that work considerably more affordable. We're investing in these early customers because the integrations and use cases we encounter with them will also help us make AsterMD a stronger platform."

Built From CodeClouds' Telehealth Experience

AsterMD grew out of CodeClouds' experience developing software for businesses operating in telehealth and related healthcare markets. Rather than repeatedly rebuilding common infrastructure for individual projects, CodeClouds began developing AsterMD as a reusable platform containing much of the functionality telehealth companies routinely require.

The result is intended to sit between fully custom software development and restrictive out-of-the-box platforms. Businesses can use the existing AsterMD infrastructure for common healthcare workflows while retaining the ability to customize the patient-facing experience and extend the platform through its APIs.

For companies beginning a new telehealth project, that can significantly reduce the amount of software that needs to be developed before launch. For existing telehealth businesses, AsterMD can provide an alternative to maintaining large amounts of custom infrastructure internally.

About CodeClouds

CodeClouds is a global software development company providing custom software, eCommerce, telehealth, AI development and integration, and dedicated engineering services. Since 2009, CodeClouds has helped businesses build, modernize, and scale software products.
