

# SqlBackupAndFtp 9.0 Now Supports Box And SkyDrive

/EINPresswire.com/ SqlBackupAndFtp 9.0 is the latest version of software for MS SQL Server database backups that was extended to support Box and SkyDrive as database backup storages.

Pranas.Net announced the release of a new SqlBackupAndFtp version that now supports the storage of database backups in Box and SkyDrive clouds.

SqlBackupAndFtp software creates backups of MS SQL Server databases. Developed in 2008 as an alternative to expensive and complicated professional products of a similar type, it quickly conquered the hearts of system administrators due to its simple and clear interface. Now, SqlBackupAndFtp is the most widely utilized [solution for database backups](#) in its price range and, because of its free version, it can be used by those who are not ready to pay for such tasks yet.

"I strongly recommend this tool to all the DBAs. They must try it as it is absolutely free and does exactly what it promises", says Pinal Dave, Pluralsight Developer Evangelist.

The idea behind this application is based on the 1-2-3 principle or, more precisely, Backup-Copy-Notify. The system makes a database backup, archives it (encrypting, if necessary), sends it to the chosen storage, and notifies the administrator on the successful or unsuccessful outcome of this process. Furthermore, the whole process is scheduled by the user.

In recent years, SqlBackupAndFtp evolved from a simple software that only makes full backups and sends it to an FTP server to a multifunctional application that allows not only differential and transaction log backups, but also sends them to different cloud storages, including Google Drive, Dropbox, Amazon S3, and now Box.net and SkyDrive.

"Extensive communications with our customers through our support service allowed us to realize that we cannot ignore cloud storages as an alternative to FTP for reliable backup database storage. Now we are happy to present our customers the support of almost all major cloud storages available on the market", said Mike Shilov, product manager at Pranas.Net.

SqlBackupAndFtp is available for \$0-\$149 depending on user needs. The full price comparison table could be found at <http://sqlbackupandftp.com/features>. Also you may contact the product manager of Pranas.Net, Mike Shilov, at [support@sqlbackupandftp.com](mailto:support@sqlbackupandftp.com).

About Pranas.NET - Over the past decade Pranas.NET has created various software [tools for MS SQL Server backup](#), MySQL database backup and [employee screenshot monitoring](#). The company has also provided consulting services building complex websites in publishing, real estate, hotel and expo industries.

The company was founded in 2003 by Ruslan Sudentas and is located at 6535 Yellowstone Blvd, Forest Hills, NY 11375.
