

HostingAndDesigns.com Announces Unmetered Traffic Servers

/EINPresswire.com/ Hosting And Designs L.L.C. - a low cost dedicated server provider with DDoS protection, announced today the availability of [unmetered traffic servers](#) on April 10th. These [dedicated servers](#) will be on a 1Gbps port which is currently available on certain server configurations.

unmetered dedicated servers on 1Gbps ports

Hosting And Designs L.L.C. - a low cost dedicated server provider with DDoS protection, announced today the availability of unmetered traffic servers for their dedicated server line on April 10th. These dedicated servers will be on a 1Gbps port which is currently available on certain server configurations. Other dedicated server configurations are possible on a per request basis and if hardware is available and in stock. Hosting And Designs L.L.C. is offering these [100TB dedicated servers](#) as the growing need for large amounts of traffic is on the rise and clients do not want to be concerned with unexpected traffic charges at the end of each month. This way clients can focus on their own day to day operations and run their server as they need with all the traffic they require.

Regardless if the client goes over the 100TB of allotted monthly traffic there will not be any extra traffic charges on the account.

These unmetered dedicated servers are located on the East coast of USA in Dunmore, Pennsylvania. The Data Center is over 30,000 sq. ft. with over 50,000 sq. ft. for expansion space available in the near future and will be SSAE 16 compliant. They are using a fiber optic network which means 1G, 10G, 40G & 100G multi-circuits running over leased fiber directly connected to New York City and New Jersey carriers. By doing this they can offer high quality traffic/bandwidth while operating in a less costly Dunmore PA region, thus providing competitive pricing without sacrificing bandwidth and traffic speeds or quality.

There will initially be two dedicated server offerings each with 100TB monthly traffic with the cheapest server configuration an Intel Xeon 3050 E6500 2.1Ghz DC for \$169 per month and the faster Intel Core i5 750 QC 2.6Ghz for \$199 per month. These servers are upgraded to a 1Gbps port instead of the standard 100Mbps ports on regular servers and come with 10GB backups and basic Cisco DDoS Guard protection at the network level and full root access.

Dedicated servers with lower specs are available on the unmetered line but is usually not recommended because a true unmetered server provider will need to setup servers that have enough CPU horsepower and RAM to handle the large amounts of traffic coming in and out of the server. These unmetered dedicated servers still come with 24/7 unlimited technical support and many value added services.

Hosting And Designs L.L.C. is a low cost dedicated server provider offering DDoS protection and several free value added services. In business since 2002.
