

AtomTime Swiss Watches Launches Fundraising Campaign for Smartphone Time Flash Synchronized Watches

/EINPresswire.com/ [AtomTime Swiss Watches](#) launched a fundraising campaign, aiming to raise sufficient funds in order to start producing the first Smartphone Time Flash Synchronized watches. Additionally, watches colors can be customized.

The world's first watch whose time can be synchronized with smartphones through the app was born in 2013 in the AtomTime group, guaranteeing to be milliseconds accurate. This technology enables all the people around the globe to have accurate time on their watch, provided a smartphone is accessible to the user.

With smartphones gaining popularity worldwide, the number of people who can benefit from the [flash synchronized technology](#) is soaring up. Displaying time within millisecond without limitations due to location or time is the hardcore principle of AtomTime watches. As soon as the watch is positioned in front of a smartphone, less than five seconds are necessary for the synchronization to be completed. No wifi, no bluetooth, no cable, no RF needed. It represents an easier lifestyle: simple, fashionable, and measurable. The i-atomic watch helps people gain control over their life by helping them controlling every second.

The new line watches consist of four colors, each representing an element in the universe. Black for the Earth. White for the Air. Blue for the Water. And Orange for the Fire. And more customized designs are inspired by the AtomTime fans, allowing them to create a [freestyle watch](#) by choosing the existing color of the wristband, dial and bezel according to their personal preference. AtomTime makes their fans an artist who can taste the freedom of watchmaking. Let fans control what they want as easily as they control time.

AtomTime Swiss Watches concept started in Switzerland in 2011 and the splendid debut of the i-Atomic watches was set in 2013. With its high-end technology it makes it possible for everyone in every corner of the world to have time accurate to within milliseconds, simply and trouble free through smartphones.
