## Executive summary

The Vietnamese construction industry recorded a CAGR of 19% during the review period. However, Vietnam's economy has undergone an extended period of insubstantial expansion, due to decelerated growth in the real estate sector, a banking system characterized by non-performing loans (NPLs) and a property market slump. This is reflected in the construction industry's growth which slowed from 19.7% in 2011 to 6.5% in 2012.

Based on the assumption that the banking sector avoids a crisis and the government manages to rebuild growth momentum with carefully targeted stimulus measures and investment in large-scale infrastructure development projects, outlook for the industry is positive. Timetric expects the Vietnamese construction industry to record a CAGR of 11.96% over the forecast period.

## Scope

This report provides a comprehensive analysis of the construction industry in Vietnam:

- Historical (2008-2012) and forecast (2013-2017) valuations of the construction market in Vietnam using the construction output and value-add methods
- Segmentation by sector (commercial, industrial, infrastructure, institutional and residential) and by project type
- Breakdown of values within each project type, by type of activity (new construction, repair and maintenance, refurbishment and demolition) and by type of cost (materials, equipment and services)

- Analysis of key construction industry issues, including regulation, cost management, funding and pricing
- Assessment of the competitive environment using Porter's Five Forces
- Detailed profiles of the leading construction companies in Vietnam
