

SIMBA Mobile Software Provides Traceability for Food & Seafood Processors

Redmond - WA July 20, 2013 / Dynamic Systems announces SIMBA Mobile 2013, provides seafood processors the ability to track products from "from sea to van".

REDMOND, WA, USA, July 24, 2013 /EINPresswire.com/ -- Increase production speed and traceability The SIMBA (Specialized Inventory Management with Barcode Accuracy) system solves the problem of how to produce and track complete product labeling for seafood on the fly.

SIMBA Mobile is designed for those companies that process at a dock or in their plant. The system runs on a mobile barcode data collection terminal, and allows the worker to produce product labels with all pertinent information, capturing product information (weight, size, color, grade) for that carton or bag. The label information is then stored in the SIMBA inventory spreadsheet, which provides data for inventory management, traceability and shipping. The cartons may be accumulated onto a pallet and tracked with a single pallet identifier.

Van Loading At the time of shipping, the Van Loading feature of SIMBA Mobile tracks each carton or pallet onto a specific van. A Bill of Lading is then produced automatically. This feature not only saves time in the shipping process, it eliminates disputes with the customer regarding what was actually shipped.

Results Key results from implementing the SIMBA software include increased production speed; the ability to get same day, accurate production reports; ability to fulfill traceability requirements; accurate inventory; professional looking carton and pallet labels; and expedited van loading.
