

Cyber Security: Europe needs the skills to match its position

As Europe positions itself as the world leader in cyber security, Alan Calder stresses that it needs the work force to match its stance.

BRUSSELS, BENELUX, BELGIUM, August 15, 2013 /EINPresswire.com/ -- As Europe positions itself as the world leader in cyber security, information security expert, Alan Calder, stresses that it needs the work force to match its stance.

“Europe needs to significantly increase the number of cyber-skilled workers in order to position itself as a leader in cyber security. Every online business needs to have a cyber security team who can help mitigate threats and ensure resilience against attacks.”

Training courses, such as the [ISO 27001 Certified](#) ISMS Lead Implementer Online Course, provide delegates with the cyber security management skills to help their organisation protect critical assets, manage reputation risk and meet a wide range of data compliance requirements.

[ISO 27001](#) is the world's only cyber security standard of which an organisation's information security management system (ISMS) can be certified against. Its practices are recognised worldwide, ensuring stakeholders with confidence and trust.

This particular online course (run by Alan Calder, CEO of IT Governance) is perfect for delegates situated throughout Europe as it means they can be taught from their office. This means there are no extra costs with training (such as travel and hotel expenses) and successful delegates are awarded the Certified ISMS Lead Implementer (CIS LI) qualification, issued by the International Board for IT Governance Qualifications (IBITGQ).

This three day [training course](#) is delivered in real-time in October and November.
