New Tool Speeds Up Folder Navigation by 300%

Actual Tools has released a new interface improvement tool - Actual File Folders.

KRASNOYARSK, RUSSIA, August 23, 2013 /EINPresswire.com/ -- This program enables instant opening of frequently used folders in any application or file dialog, greatly boosting user productivity.

File and folder navigation is an inevitable and natural part of everyday work on a computer. Although it has greatly improved in modern operating systems, the process can still be quite time consuming, because not all file dialogs actually support the favorite folders functionality of the OS.

Actual File Folders expands favorite folders to any "Open"/"Save As" file dialog in any application. In particular, the program keeps two lists of folders: Favorite Folders, which act very similar to Favorites in a web browser, and Recent Folders resembling the browsing history.

The Favorite Folders list keeps all folders a user has added to it, and allows literally one-click switching to any of these folders. The list can be invoked from any file-related dialog using additional buttons Actual File Folders places in the caption of the dialog window. The Recent Folders list stores all recently opened folders, so a user can quickly get back to any of those folders with a click. A user can use these abilities in "Open" or "Save As" dialogs of Microsoft Office and other apps, can quickly locate particular folders in Windows Explorer or boost the navigation power of popular file managers like Total Commander or Directory Opus.

Actual File Folders replaces tedious mouse clicking with just one click for any folder a user wants to switch to. Plus, it works anywhere and is compatible with any other software.

Pricing and availability

Actual File Folders runs on all Windows platforms from Windows 2000 onwards and costs USD19.95 for a single-user license. Discounts for bulk buyers are available (please refer to http://www.actualtools.com/filefolders/order/#volume_discounts). Additional information on Actual File Folders, a collection of tutorial articles and success stories, and a 14-day evaluation copy are available on the Actual Tools website.
