

# Stop Birds from Landing with the Bird Spider® 360°

*The Bird Spider® 360° is a bird deterrent that rotates and bounces to deter large birds from landing on lights, boats, signs, rooftops, A.C. units and more.*

IRVINE, CA, UNITED STATES, September 16, 2013 /EINPresswire.com/ -- Bird-B-Gone, Inc. leading manufacturer of effective, humane [bird deterrents](#) would like to announce the addition of a new product, The [Bird Spider®](#) 360°.

The Bird Spider 360° is a physical bird deterrent that rotates and bounces in the wind to deter large birds from landing on unwanted areas such as light fixtures, boats, docks, signs, rooftops, A.C. units and more. The moving parts make it impossible for large birds such as pigeons, crows and gulls to land in concentrated areas.

“

The Bird Spider® 360° is an ideal way to keep large pest birds from landing on rooftop A.C. units, vents and other areas they are unwanted.”

*Ian Rowsby, Director of Sales*

An improvement on the original Bird Spider design, the Bird Spider 360° is made of durable yet lightweight materials that are designed for prolonged outdoor use. The body and base are composed of a U.V. protected polycarbonate plastic, and the arms marine grade stainless steel. Bird Spider 360° is manufactured by Bird-B-Gone in the USA ensuring high quality construction and lasting performance.

The spinning spider can be glued or screwed down for permanent installation or mounted for temporary use with any of the unit's optional bases such as the sand bag or boat base which easily attach to the base of the Bird Spider 360°.

The unit has optional mounting bases to choose from and can be mounted to railings, masts, bimini and canvas covers, flat surfaces and more. A locking pin in the base ensures the Repeller 360° will not blow away in high winds.

About: At Bird-B-Gone it's our expertise, training and customer service that set us apart. Our high quality [bird control products](#) carry the longest industry guarantees, and are proudly made in the United States.
