

Secure Multiple-Device Password Management with Sticky Password 7.0

Latest upgrade moves password management to the cloud for fast synchronization.

BRNO, CZECH REPUBLIC, September 25, 2013 /EINPresswire.com/ -- Lamantine Software, with over a million satisfied customers, is pleased to announce the first cloud-centric version of their popular Sticky Password software. In addition to secure generation and management of an unlimited number of passwords, Sticky Password also now supports synchronization across multiple mobile device types as well as Windows-based computers, bringing the convenience of automatic website and application login and fast transactions to users on the go.

“By introducing cloud-based storage and synchronization of secure passwords, Sticky Password users can check in and out of websites instantly without risking identity theft,” says Lamantine Managing Director Petr Bilek. “In today’s anytime, anywhere, ultramobile world, we’re delighted to bring Sticky’s high levels of security and ease of use to the world in an easy-to-use, accessible app.”

Sticky Password is the ideal [password manager](#) and automated form filler for today’s web. The software generates unique passwords and manages associated personal information for form-filling for apps and sites, and stores them all in an encrypted database that’s accessible both on- and offline. Because users never enter their passwords or other information manually, they are protected against phishing scams and keyloggers.

Sticky Password 7.0 jumps ahead of the competition by introducing tailor-made apps for individual smartphone and tablet platforms; users can authorize as many devices as they wish to access their password and data store on a single license. It brings functional autofill to mobile browsers for the first time with a transparent floating window that lets users apply their credentials as needed without interrupting what they’re doing. Important new functionality includes:

- Support for [Android](#) phones and tablets, each with an individually developed interface
- Redesigned Windows PC application
- Seamless and secure cloud synchronization and backup ensures data is always available to the user on any device
- Personalized web portal for device, license, synchronization, and backup management

A new iOS app is in beta and expected to be released before the end of 2013.

Lamantine is also continuing to make available an offline version of the software with all the same core functionality as the cloud product, including:

- Automatic login and form filling
- Military grade AES 256 encryption
- Unpredictable password generation
- Portable USB version
- Secure storage of personal notes

Adds Bilek: "Sticky Password technology is respected around the world, and licensed by leading security organizations like Kaspersky Lab (<http://www.kaspersky.com>) to power their password management solutions. This latest version enables us to continue to support the ever-growing need for stronger and less-memorable passwords as more and more of our lives move on line."

A 30-day trial version of Sticky Password 7.0 can be downloaded at <http://www.stickypassword.com/support/downloads>. Annual subscriptions for the software are priced at time limited introductory period at \$12.00 per year.

A short white paper is also available which describes the security architecture of Sticky Password 7.0. Interested users can download the paper at http://download.stickypassword.com/files/SP7/Sticky_Password_SecurityWhitePaper_EN.pdf
