Top App Development Company Ready for the new iPhone 5S

The release of the new iPhone 5S has created a massive buzz. The new iOS7 operating system that comes with it means companies need to update their apps.

MELBOURNE, VICTORIA, AUSTRALIA, October 7, 2013 /EINPresswire.com/ -- Apps Developers Australia (SDI) is up to the task. They are a software development company based out of Melbourne with branch offices in the US, India, and UK. Their team of over 200 developers and 30 practise experts have created hundreds of iPhone apps since they opened for business in 2006. They have served small business entrepreneurs and major corporations like Pepsi Co. and are excited about making apps for the new iPhone.

The iPhone 5S is now the most powerful smartphone on the market blowing competitors away with blistering processor speeds and enhanced capabilities. These upgrades mean the phone is capable of so much more than its predecessors, and SDI has the expertise to take advantage of what this means for iPhone app developers.

They can create new iOS7 apps at a better price point, and under tight deadlines. SDI prides itself on being able to offer top-level release products at rates much lower than the competition. For example, an app that costs over $50,000 to produce could only cost $10,000 if done by SDI.

The reason for this is that their development team has mastered the fine art of utilizing already existing tools and features to create apps. They only employ the best, and their developers are paired with practise experts who offer industry-specific experience to help steer the course of development on the right path.

SDI stays close with their clients as well. They sign a non-disclosure agreement so the details of their app idea won't leak and all information about it is kept secret. They provide feedback on your idea and let you know if it's worth pursuing. If it is, they assist their clients in sharpening that idea until it becomes a guaranteed blockbuster hit at the app store on release date.

SDI's iPhone app developers design things with success in mind. They strive to make apps that flow seamlessly and provide a great user experience. Plus, they want to make apps with powerful, transformative qualities that can impact people's lives and empower them with new functions. The new capabilities of the iPhone 5S make this possible and SDI strives to stretch the new technology as far as it will go.

To find out more about SDI, or share with them your idea for the next big app, send them an email at team@sdi.la, or visit their website at www.appsdevelopers.com.au
