

Stainless Steel Bird Spikes Provide Anti-Perching, Anti-Roosting Protection

Stainless steel birds spikes are ideal bird control devices to keep birds like pigeons, gulls and crows from landing and roosting.

IRVINE, CA, UNITED STATES, October 24, 2013 /EINPresswire.com/ --

Specified by architects, contractors and government agencies, [Stainless Steel Bird Spikes](#) are the anti-perching, anti-roosting [bird deterrent](#) that will not permit larger birds—like pigeons, crows and gulls—to land on or near them. Blunted at the tips, the spikes won't harm birds, pets or people, and they have been approved by a number of humane groups—including the U.S. Humane Society.

Birds that perch and roost cost property owners plenty in terms of maintenance, cleanups and repairs. Bird droppings can quickly deface and permanently mar surfaces unless they are promptly removed. The acid in bird droppings will eat into paint, fabric, plastic, metal and even degrade stonework. Birds also pose a health hazard, since they can carry any of 60 known diseases, including salmonella. Bird nesting debris constitutes a fire hazard, since the dried materials make

excellent kindling for electrical fires. Bird debris can even block vents, and prevent AC units from functioning properly.

Stainless Steel bird spikes have been successfully used worldwide to provide an ideal bird deterrent. They prevent birds from gathering on ledges, rooflines, parapet walls, eaves, I-beams, windowsills, signs, light posts, awnings and canopies. The spiked strips come in two-foot sections, providing up to 40 spikes per foot in a linear array. Three different widths—3-, 5- and 8-inch—are available to match the width of the “bird problem” area. The base of the [spiked strip](#) is just 1.5 inches wide, so it's easily installed on narrow surfaces. A built-in glue tough and pre-

drilled mounting holes simplifies installation using commercially available glues, screws or tie downs. Further simplifying installation is the flexible base, which bends a full 360 degrees, allowing the spiked strip to adapt to curved surfaces like lampposts and lettered signs. The spikes are virtually invisible and feature a patented “bend and crush” design, which ensures that the spikes stay secured in the base.

Stainless Steel bird spikes are GSA approved and embedded in unbreakable UV-protected polycarbonate base to last for years through sun and rain. Each is manufactured in the USA and comes with a 10-year guarantee.
