

New York Orthopedic Surgeon's Creative Hip Replacement Approach Published In New Article

Dr. Nakul Karkare's inventive approach to anterior hip replacement procedures has been highlighted in a newly published article.

LONG ISLAND, NY, USA, November 11, 2013

/EINPresswire.com/ -- The recent article titled "St. Charles Hospital Orthopedic Specialists Invent and Refine Surgical Techniques" has been published at MD News. This article focuses on innovative techniques used by Dr. Karkare, and highlights the benefits of the anterior hip replacement procedure.

"The anterior hip replacement procedure is one of the more satisfying surgical procedures in Orthopedics. With an anterior approach, no muscles are cut during the procedure. The patient can squat on the floor the same day as surgery without risking dislocation. Patients have minimal pain, undergo faster rehabilitation and return home rapidly after surgery," says Dr. Karkare.

Nakul V. Karkare MD, Anterior Approach Total Hip Replacement Surgeon, Long Island, NY

“

The patient can squat on the floor the same day as surgery without risking dislocation. Patients have minimal pain, undergo faster rehabilitation and return home rapidly after surgery.”

Dr. Karkare

The anterior hip procedure is minimally invasive, occurring through the front of the hip. With this approach the surgeon works between the muscles, preserving the tissue that maintains a strong joint. This greatly reduces the risk of dislocation after surgery. The result is better patient outcomes.

Those interested in learning more about Dr. Karkare are encouraged to read the article about his innovative approach to anterior hip replacement, [click here](#).
