

Explore the benefits and new business developments brought about by M2M Telematics for Usage Based Insurance

SMi's second annual M2M Telematics for Usage Based Insurance conference will address how insurers are attracting new customers through M2M Telematics and UBI.

LONDON, UNITED KINGDOM, January 6, 2014 /EINPresswire.com/ -- Certain industries are already seeing an uptake in M2M, particularly where regulations are driving adoption such as the automotive and insurance sectors. In 2014, e-car regulations will start taking effect, where vehicles will have to automatically send out information about their location after a crash. Furthermore, the [M2M Telematics](#) market is set to grow at a CAGR of 35.81 percent over the period 2012-2016 as drivers, automotive and insurance companies are quickly realising the benefits of this technology and are taking advantage of insurance premium savings, new customer uptake and increased procurement of telematics equipment.

Against this backdrop, SMi's 2nd annual M2M Telematics for [Usage Based Insurance](#) conference, taking place on 19-20 February 2014 in London, will provide the ideal platform to explore the various opportunities this presents in everything from automotive to public safety to financial services. The two-day event will bring together senior level delegates from all aspects of the insurance and commercial automotive industries to find out how to make the most of the new business opportunities brought about by the transformation of old business models to new usage based insurance products. From new device development and connectivity partners, to dynamic real-time data on driver behaviour, companies now have the opportunity to understand risk at a much deeper level and the ability to translate this intelligence into a meaningful commercial advantage.

Key presentations at SMi's 2nd annual M2M Telematics for Usage Based Insurance conference include:

- Risk and reward for policy holders
Mark Grant, Business Development Director, insurethebox
- Enabling telematics based UBI in vehicle design

Ian Digman, Product Planning General Manager, Nissan

- Usage Based Insurance for young drivers - Embracing the connected lifestyle
Crispin Moger, Managing Director, Young Marmalade

- Encouraging innovation for customers and insurers
Paul Middle, Telematics Lead, RSA Insurance Group

- Telematics in action - insurer and consumer initiatives
Andrew Price, Practice Leader - Motor Fleet, Zurich Insurance
Rory Morgan, National Logistics General Manager, Iron Mountain

Plus, a Panel Debate featuring Ingenin, Young Marmalade and Progressive Platforms:

- Reinventing the insurance business?
Manjit Rana, Founder and Director, Ingenin
Crispin Moger, Managing Director, Young Marmalade
Mark Fensome, Managing Director, Progressive Platforms

Getting the most from Big Data in the Connected Car market Pre-Conference Workshop | Led by Emil Berthelsen, Principal Consultant, Machina Research | 18th February 2014, London, UK
The connected car is introducing significant changes to the automotive industry. While enabling optimised vehicle performance, improved service routines and enhanced customer experiences, the connected car has also opened significant opportunities from the data that is generated. This connectivity and data has started to build new relations in the industry, and provides further opportunities for e.g. vendors, insurers, public organisations, and system integrators to combine this data with other data sources, design new propositions, and deliver new benefits to customers. Attendees of the workshop will be encouraged to participate actively during the workshop; openly sharing their experiences, perspectives and ideas.
