

MountzPro® Launches New Blog - "At The Track"

MountzPro® launches "At the Track", a new daily "car show" blog. The new online virtual car show allows all car enthusiasts to share pictures of their car.

SAN JOSE, CA, USA, January 13, 2014 /EINPresswire.com/ -- MountzPro® launches "[At the Track](#)", a new daily "car show" blog. The new online virtual car show allows all car enthusiasts to share and display pictures of their car and how they've modified their ride. It's a show for classic cars, muscle cars, exotic cars, supercars, trucks, motorcycles and everyday cars, all in one.

MountzPro invites all car enthusiasts to submit pictures of their "ride". Once an enthusiast submits a photograph and written description, he or she competes in a quarterly "Best in Show" contest for a cash prize. Readers can vote for "Best in Show" and post comments on individual cars. Enthusiasts think they have the best looking car on the block, but how does it match up against the rest of the world? They can share their ride and see how the community votes and express their opinions.

MountzPro, a new division of the nearly 50-year-old Mountz, Inc., focuses exclusively on the automotive professionals market. MountzPro has recently introduced an innovative [automotive torque wrench](#) designed to address the shortcomings associated with the typical torque wrench.

The patented MountzPro True Dual Scale Torque Wrench is distinguished by calibration and usability in both SAE and metric scales. Whereas most wrenches are calibrated in one unit of measurement, the primary scale — with the other unit of measurement only a reference — the MountzPro wrench eliminates mathematical conversions, hassle and imprecision. The wrench recently won a coveted Pro Tool Innovation Award from Pro Tool Reviews in December 2013. The product reflects the MountzPro philosophy of "fastening made easy."

The durable MountzPro wrench is built with a strong steel shaft with a high corrosion resistance. The click wrench also features a bi-directional ratchet head with a push button socket release. The [adjustable click wrench](#) features a "Positive Torque Locking Knob", which securely locks the preset torque and prevents accidental adjustment of the torque setting.

Designed and manufactured to meet or exceed the accuracy and repeatability requirements of ISO6789: 2003, MountzPro offers various torque wrench models covering a torque range from 15 up to 1,000 foot-pounds. The tool is supplied with a certificate of calibration. Certified in both scales.

Using a quality torque wrench makes a safer world through accuracy and precision. Controlling torque is essential for companies to ensure their product's quality, safety and reliability isn't compromised. The failure of a three-cent fastener that isn't properly tightened can lead to catastrophic or latent failures. Fasteners that are insufficiently fastened can vibrate loose and excessive torque can strip threaded fasteners.
