

PalmLock - Biometric Security for SAP powered by Fujitsu

realtime announces strategic relationship with Fujitsu for distribution of PalmLock, a solution combining the PalmSecure device with bioLock™ for use with SAP®.

TAMPA, FLORIDA , USA, April 29, 2014 /EINPresswire.com/ -- TAMPA, Florida (April 29, 2014) – Today [realtime](#) North America Inc. announced an integrated solution for advanced biometric protection in SAP® using Fujitsu's PalmSecure® award winning vein imaging technology. Additionally, realtime announced that Fujitsu Frontech North America Inc. will distribute the bundled solution via its global network of channel partners. Available now and to be offered under the name [PalmLock™](#), it combines Fujitsu PalmSecure® biometric palm vein scanning sensors with SAP-certified [bioLock™](#) security and monitoring software from realtime.

The bioLock™ security system now is able to authenticate SAP user activities using palm vein scans captured with Fujitsu PalmSecure sensors. Biometric authentication can be applied at log-on, or at more detailed SAP transactions in Finance, HR, Sales, Customer Service and more. The solution can be implemented on PCs or tablets, but also at end-points such as employee self-service kiosks and retail POS terminals.

“We are excited to work with Fujitsu as they offer this mission-critical solution to SAP users in major global markets and diverse industry verticals,” Thomas Neudenberger, COO of realtime North America Inc. The bioLock software is natively designed for use with SAP and provides biometric identity management and re-authentication of users working in SAP. The PalmSecure vascular pattern recognition technology combines highly reliable authentication and “live-ness” detection with high speed and low false accept/reject rates. The bioLock software solution is the only biometric security system certified by SAP.

According to Bud Yanak, Director of Currency Handling & Identification Product Solutions at Fujitsu Frontech North America Inc., “because palm vein patterns are so complex, unique and stable over a person’s lifetime, they provide an excellent biometric for authenticating SAP activities, overcoming the limitations of traditional password-based security.” Unlike other technologies, the PalmSecure sensor does not come into contact with the user’s skin, so it is readily accepted, hygienic, non-intrusive and unrestricted by external factors such as skin types and conditions.

About Fujitsu Frontech North America, Inc.

Fujitsu Frontech North America Inc. brings innovative technology from Japan and, with its partners, develops powerful front-end solutions that shape how society interacts with big data. Fujitsu Frontech North America Inc. is headquartered with operations and solution development at 27121 Towne Centre Drive #100, Foothill Ranch, CA 92610, USA.
