

Ecrypt Technologies, Incorporated's Ecrypt One to Revolutionize Email, Data Transfer, and Network Security.

Ecrypt Technologies, Inc. (ECRY) is set to deliver a powerful, military strength encrypted security platform to private sector companies.

DALLAS, TX, USA, June 23, 2014

/EINPresswire.com/ -- The global

economy is dominated by the Internet in the information era, and it's time that a company devised a data security system that took the most dangerous liability for any organization, human error, out of the equation. It is high time that large companies in the private sector, who spend millions on data security annually, get the same strength security that the military is afforded. Ecrypt Technologies, Inc. (ECRY) is poised to do just that, bring an all-inclusive secure email and

data transferring security platform, Ecrypt One, to the market, offering organizations military level data transfer security strength brought to you from a brain trust with decades of government, military, and Department of Homeland Security experience. ECRY offers an unparalleled opportunity for growth in the Internet and computer security sector, where the company has developed an unrivaled approach to securing networks and even, eventually, private computers. The company is taking a "trickle down" approach, starting with large, high end clients that require military strength securitization for their information transferring systems and their networks.

ECRY's strong, respected, and highly talented leadership group will draw upon decades of networking and experience in day to day management in both the government and private sectors to deliver an all in one, easy to use email and data security solution that large companies can depend on. ECRY's management boasts top level pioneers in the Internet Security sector, with DHS management and private sector industry wunderkinds that will lead the company to initial success. Here is a quick peek at the stellar leadership group that heads up Ecrypt Technologies, Incorporated:

Chairman: Curt Weldon - Served 20 years in the US Congress and retired as Vice Chairman of both the Armed Services Committee and the Homeland Security Committee.

CEO: Thomas A. Cellucci PhD, MBA - An authority in rapid time-to-market new product development.

COO/Founder: Brad Lever - Leading visionary behind Ecrypt's technologies.

Directors: Dr. Erik Mettala - Inducted into the Information Systems Security Association (ISSA)

International Hall of Fame; The Honorable Jay Cohen - A retired Rear Admiral of the United States Navy and former Under Secretary of Homeland Security for Science and Technology of the United

States Department of Homeland Security; Thomas Trkla - A frequent speaker on trends in the United States' commercial real estate markets and on core, value-add, and opportunistic investment strategies.

The brain trust of ECRY has worked to develop the only system that addresses the true risk to any Internet or computer security system, the human being. As Kevin Mitnick, The World's Most Famous Hacker has been quoted as saying: "Companies spend millions of dollars on firewalls, encryption, and secure access devices and it's money wasted because none of these measures address the weakest link in the security chain: the people." Firewalls and malware software and anti-viruses can be purchased, maintained and installed, at a hefty price for large companies, but it only takes one employee to click on a link or open an email from a supposedly trusted source for an entire network to be damaged or destroyed. ECRY's innovative security system focuses on eliminating gaps that are being exploited in conventional systems, as 72% of all data breaches are caused by human error. ECRY's state of the art encryption system, Ecrypt One, eliminates the possibility of human error, securing the entire system so human mistakes cannot destroy or breach a network. The company will focus on high end customers first, customers who understand and who already pay top dollar for security systems that do not solve their problems, customers who trust in the experience, creativity, effectiveness and history of the brain trust behind the leadership at Ecrypt Technologies, offering excellent revenue and profit in the next few years.

About Ecrypt Technologies

Ecrypt Technologies, Inc. is at the forefront of data, Internet, and information security, specializing in military-strength information security solutions for enterprise, government and military institutions. Ecrypt empowers organizations with the freedom to communicate and collaborate without risk of liability, reputation damage, competitive threat and other negative outcomes. Ecrypt is the trusted first choice for those looking to keep their communications and their all-important information and data confidential.
