

Ecrypt Technologies, Inc. to Release Ecrypt One Alpha Unit, a Military Strength Network Security System

*Ecrypt Technologies, Inc. (ECRY)
Unleashing the Innovative Ecrypt One
Alpha Unit, Forms Strategic
Partnerships, and Unveils Corporate
Strategy*

DALLAS, TX, USA, June 25, 2014
/EINPresswire.com/ -- [Ecrypt Technologies, Inc](#) (ECRY) has devised an easy to use data transfer and email network security platform that eliminates the most dangerous liability for any organization, human error. 72% of all data breaches that occur today are caused by human error, but no other network security system amply addresses that issue. [Ecrypt One is designed to eliminate](#) human error from

the corporate landscape, and with companies as large as Target and EBay dealing with dangerous information breaches, Ecrypt One couldn't be timelier. With Ecrypt One, large companies in the private sector, spending billions of dollars on network security annually, can purchase the same strength network security that the military is afforded. ECRY's Ecrypt One, an all in one email and data transferring security platform, has been developed by leadership with years of government, military, and Department of Homeland Security experience. ECRY offers an innovative approach to modern data transfer and network security. The company is implementing a "trickle down" approach in regards to corporate philosophy and market strategy, beginning with large corporate clients that require military strength securitization for their information and data transferring systems and networks right now, eventually bringing the same type of security to the private market.

ECRY's talented and experienced leadership is drawing upon years of networking and management skills to gain market share for Ecrypt One, releasing its Alpha unit of Ecrypt One by the end of July. The company has also partnered with privately owned software and consulting specialist QCR Corp, and with Enterprise Sentinel, who provide innovative password replacement technology to businesses.

ECRY's leadership is filled by a who's who of pioneers in Internet, data, information and network security. The company Chairman, Curt Weldon, served 20 years in Congress, retiring as Vice Chairman of both the Armed Services Committee and the Homeland Security Committee. CEO Thomas A. Cellucci PhD, MBA is a noted authority in product development. The COO, Brad Lever, is the founder of Ecrypt Technologies. The company's celebrated directors include Dr. Erik Mettala,

Information Systems Security Association (ISSA) International Hall of Fame inductee, the Honorable Jay Cohen, Rear Admiral of the United States Navy, retired, and former Under Secretary of Homeland Security for Science and Technology of the United States Department of Homeland Security, and Thomas Trkla, a highly respected public speaker and commercial real estate and investment strategy expert.

ECRY has developed a unique network security system, the only one on the market today that addresses the real risk to network and email security, human error. Kevin Mitnick, The World's Most Famous Hacker, put it best: "Companies spend millions of dollars on firewalls, encryption, and secure access devices and it's money wasted because none of these measures address the weakest link in the security chain: the people." Firewalls, malware, and anti-viruses are costly and require constant maintenance, but they can be rendered useless with one click of a mouse. One open email from a supposedly trusted co-worker or client can take down an entire network. Ecrypt One negates human error. The company is focused on engaging high end customers now, customers ECRY's leadership is familiar with, and private customers later.
