

The John Device, Tomorrow's Answer to the Energy Crisis is Here Today

SPRING HILL, KANSAS, UNITED STATES, July 17, 2014

/EINPresswire.com/ -- David Woodrow John is on a journey. It's a journey that began 15 years ago, and during that time, he developed a concept to revolutionize our technology-based civilization's need for efficient, economical, accessible fuel. Matching innovative technology to the common need, he built a machine, or, as he describes it, "The Machine" that defies gravity in a way that has never been imagined before. This machine named "The John Device" and dedicated to his parents, is capable of creating electricity out of the forces of not only gravity, but also buoyancy, magnetism and electro-magnetism, acceleration and deceleration. John is eager to make his patent-pending invention available for the world, and with that in mind, he has launched an [IndieGoGo crowdfunding campaign](#) to raise \$2,147,483,647 by August 23.

John's journey got underway when he realized that today's dreams are the fuel for tomorrow's prospects. In order to make his dream come true, John built his machine, created the websites to promote his product, developed his marketing plan, mastered CAD (Computer Aided Design) so that he could develop an accurate computer model for production, designed multiple new generations, filed patents, and wrote a book.

But any [revolutionary invention](#) needs to be patented. The U.S. Patent Office has

HISTORY OF POWER GENERATION ON EARTH

THE "FIND IT AND BURN IT" YEARS...

MAN DISCOVERS FIRE

MAN DISCOVERS COMPRESSED FIRE

MAN DISCOVERS REALLY REALLY COMPRESSED FIRE

THE JOHN DEVICE IS HERE.

MAN DISCOVERS HOW TO OBTAIN POWER WITHOUT BURNING THINGS

??B.C. - THROUGH HISTORY - 20TH CENTURY - TODAY

THE "ALTERNATIVE ENERGY" YEARS...

MAN DISCOVERS HOW TO USE THE SIDE EFFECTS OF GRAVITY AS A SOURCE OF POWER

THE JOHN DEVICE IS HERE.

MAN DISCOVERS HOW TO OBTAIN POWER DIRECTLY FROM GRAVITY AND OTHER FORCES

WWW.THEJOHNDVICE.COM

asked John to separate the original John Device patent into 11 different categories. Crowdfunding

earnings will be used to meet this requirement as well as finance the other patents that are needed. The United States patent decision, a TrackONE application, will be rendered within 12 months rather than the usual extended 36-month period of time. The cutting-edge technology of The John Device drove the international application to be accepted for early publication. The next round of patent information needs to be submitted by August 25, which is why the crowdfunding deadline is August 23.

John's parents—mother Martha A. John, has a PhD in education from Stanford and father Floyd I. John, with a PhD from Purdue in mathematics—instilled in him a love of learning, and he acknowledges their contribution to his research. Building on the quote from the brilliant Sir Isaac Newton, who said, "If I have seen further, it is by standing on the shoulders of giants," John credits his parents for being the giants upon whose shoulders he stood and saw. The John Device possesses the [ability to use the force of gravity](#) and its associated buoyancy, permanent and/or electro-magnetism and the accompanying forces of attraction and repulsion, along with acceleration and its associated force of deceleration to produce useful torque, which can be used to generate electricity for devices and machinery requiring it in order to operate.

In his book, *How Everything Works: From Atoms to Universes*, John addresses the issues that may incline people to be skeptics. His vision of the world with The John Device has the potential to unlock hitherto impossible advances in chemistry and biology. With The John Device, cancers can easily be detected in the human body. Gravity can be subdued and controlled, news which NASA scientists will greet with unbounded enthusiasm.

Any monumental advance in technology has its nay-sayers. Imagine the reaction in the neighborhood when Wilbur and Orville Wright said they were building a machine that could leave the ground and transport people from one destination to another, using the sky as a highway. Who could have predicted, outside of science fiction, that cell phones that fit in our pockets would be capable of storing as much data as a full-size computer? John recognizes that perception is slow to respond to promise, and is ready for the doubters. He's issued a challenge. Anyone who can disprove his theory will receive \$10,000. He welcomes the testing.

Detractors will include the companies whose revenues are based on the production of oil, nuclear power, and even alternative energy. But the days when nations are slaves to the whims of fuel are numbered, as The John Device moves the world into a new energy frontier.

About The John Device

The John Device (www.thejohndevice.com) is the invention of David John, who has embarked on a groundbreaking journey that will redefine energy as we know it. His patent-pending device with its Continuously Variable Rotating Plane Technology (CVRP) is designed to produce electricity from gravity, buoyancy, magnetism, electro-magnetism, acceleration and deceleration. John's crowdfunding campaign will help to raise the money needed to complete the patent application process.
