

Donovan Browning Touts Importance of Continuing Education in Providing Superior Quality Dentistry

Donovan Browning Takes Continuing Education courses in Seattle to keep up with the latest in dentistry.

AUBURN, CA, USA, August 13, 2014 /EINPresswire.com/ -- [Donovan Browning](#) runs a state-of-the-art dental practice in Auburn, California, and is committed to keeping up with all of the latest trends in his discipline.

The field of dentistry is constantly changing and evolving, [Donovan Browning](#) says, so keeping up with new technology is of critical importance. "I have taken continuing education classes at the Kois Center in Seattle on complex restorative procedures," he says, naming the state-of-the-art center for learning the latest in dental health. "I've also taken classes on implant surgery, Invisalign, oral sedation, and classes on dental lasers."

Invisalign is one of the most promising of the new techniques now available, and Donovan Browning is certified in this procedure. Invisalign, he says, is a proprietary method of orthodontic treatment that uses a series of clear, removable teeth aligners to straighten out the patient's teeth. He says they are an alternative to conventional braces and are great because there is no metal involved.

The Invisalign aligners, Donald Browning says, are small trays that are similar to night guards or the kind of mouth guards worn by athletes. He says that every few weeks, the patient replaces one tray with a new one, so that the aligners gradually and gently shift their teeth into an ideal alignment.

[Donovan Browning](#) also says that lasers are an increasingly common dental tool, used to improve efficiency and eliminate discomfort in a number dental procedures, including filling cavities, reducing tooth sensitivity, getting rid of tumors, and whitening. "We do gum surgeries with lasers for gum disease," he says. He adds that laser dentistry is fast, painless, and can effectively eliminate any form of bacteria during the procedure to avoid any further complications or problems.

Donovan Browning has also learned to do dental implant surgery at the Kois Center. Dental implants, he says, are screw-replacements for the root portion of missing teeth. They are used to

restore healthy smiles in patients who have missing teeth. Implants are effective, Donovan Browning says, because they can replace missing teeth, while still giving the patient the feel and look of a natural tooth.

Donovan Browning says that one of the most important things that he and his office staff do is make each patient feel relaxed and confident with their checkup or dental procedure. He understands that the fear of going to the dentist is widespread, to the point where some forty million Americans avoid regular checkups. "We help people who are anxious and nervous by using oral sedation medications so people are relaxed and don't remember the appointment," he says. "It's great for people with high dental anxiety!"

All of it, says Donovan Browning, is meant to make a visit to the dentist a more pleasant and effective experience. "We treat people as we want to be treated," he says. "We are gentle and kind. We genuinely care about our patients." Donovan Browning and his staff work hard to give their office a fun and friendly atmosphere, and it's one of the reasons that he has been so successful since establishing his Auburn office in 2006.

About: Donovan Browning keeps up with Continuing Education courses in Seattle.
