

APAC enterprises should be implementing ISO27001, suggests IT Governance

IT Governance, suggests that Asia Pacific (APAC) enterprises should be implementing ISO27001 to combat the growing threat of cyber crime.

PERTH, AUSTRALIA, August 21, 2014 /EINPresswire.com/ -- [IT Governance](#), the global leaders in information security, suggests that Asia Pacific (APAC) enterprises should be implementing [ISO27001](#) to combat the growing threat of cyber crime.

ISO27001 is the international information security management standard that protects information assets. It helps businesses comply with local legislation and legal requirements, and thrive in the market.

According to a joint study conducted by IDC and the National University of Singapore (NUS), enterprises in the Asia-Pacific region (APAC) are expected to spend nearly US\$230 billion in 2014 to deal with issues caused by malware deliberately loaded onto pirated software. The expenditure is only expected to increase in the coming years as more companies move their data onto mobile devices, corporate networks and the Cloud.

IT Governance is urging APAC enterprises to implement ISO27001 in a bid to reduce the cost of cyber crime while protecting their information assets.

Published this month, IT Governance launched four global [ISO27001 packaged solutions](#) to help businesses fight cyber crime. Containing resources, training and/or consultancy online, these packages are fixed-price to meet any company's needs and budget requirements.

Alan Calder, founder and executive chairman of IT Governance, said, "If understood and implemented correctly, ISO27001 can help to rationalise security expenditure and reduce the impact of cyber crime, while giving a business a competitive edge."

The all-in, ISO27001 'Do-it-yourself', 'Get a little help', 'Get a lot of help' and 'We'll do it for you' packages can be booked online at www.itgovernance.asia/t-iso27001-solutions.aspx.
