

Timaru's Andar Holdings Cracks Chindia

Timaru Production Engineer Exports Processing Lines to India & China

HASTINGS, HAWKES BAY, NEW ZEALAND, October 8, 2014 /EINPresswire.com/ -- Timaru's Andar Holdings Proves Chindia is a Reality for Large-Scale Advanced Heavy Turnkey Primary Processing Equipment Project Sale.

Timaru's Andar Holdings belongs in the top tier of the nation's heavy machinists with lathe beds of five metres, and with colossal turnkey precision engineering installations in both China and India.

These two "Chindia" realm projects feature an all-processes installation in China for its Cardmaster Woolscour and a similar completed project in India, this time for its Topmaster Scour. At home Andar supplied the intake gates for the new mid-Canterbury irrigation scheme.

The scope of the company is revealed by its four overhead gantry cranes from 3 to 5 tonne lift.

In addition to its considerable investment in tooling a particular strength of the company is its skilled and stable workforce.

In marketing terms another strength is its willingness to take turnkey responsibility on all projects wherever they are.

With its curious name, more reminiscent of a light engineering office products distributor, Andar Holdings remains a principal participant in the evolving growth market for New Zealand manufacturing engineers in the global primary produce processes sector.

This has the overwhelming competitive advantage in terms of access of having a high bar to entry for competition. Most important of all for Andar, it already has international and working reference sites.

Andar Holdings has extended practical probes into such high profile imminent global process markets such as those for waste handling and wool micro technology.
